

Thinkproject

Pricing Document

G-Cloud 15

This document provides pricing Information for the Thinkproject Platform, as included in the Thinkproject Service Definition.

Due to the configurable nature of the system, and varying individual customer requirements, the pricing in this document is provided as a guideline for potential customers and will be adapted to those users' specific needs.

Our pricing structure is broken down into setup, SaaS subscription, and training. We do not operate a per User licence fee as collaborative projects call for dynamic and evolving teams with the maximum amount of input from all stakeholders. Therefore, the licence is sensitive to the parameters of the project including, applicable modules, number and type(s) of forms/workflows, total contract value and duration of works, etc:

1. **Configuration and set-up** – modules, initial forms, workflows, Users, governance and reporting. On-going User, and Contract maintenance and setup is managed by the Superusers.
2. **Subscription (Software as a Service)** - based on project requirements, duration, and value. This includes hosting, maintenance, backup, and support.
3. **Training** - Thinkproject Academy provide a fully on-demand interactive eLearning experience and offers delegates learning checkpoints, quizzes, video and audio content, alongside user training accreditation.

Due to the pricing requirements of G-Cloud, please find below our maximum comparative rate per User, per month.

Maximum cost per User, per month, for comparison - £200
--

Typically, for larger portfolios, the cost per User, per month, is a fraction of this. All pricing is given on the basis of the thinkproject terms and conditions and is exclusive of VAT.

Note - subject to minimum commitment of at least 10 Users.
