1. G-Cloud Service Definition

Aetopia AI Redact provides a secure and powerful software solution for Audio and Video redaction. Designed specifically for Police and other investigative agencies, AI Redact allows critical digital evidence such as CCTV, body-worn video, digital interviews, 999 calls to be swiftly and safely redacted using AI-assisted redaction pipelines.

Service features

- Automated detection of faces, people, licence plates and objects
- Automatic tracking of detected objects across entire videos
- Merge object identities to simplify redaction tasks
- Apply manual redactions with or without automation
- Attractive, easy to use redaction dashboard
- Flexible playback options
- Generate redacted videos with burned-in redaction shapes
- Create redacted audio files with mutes or beeps
- Optional speech to text feature to assist navigation
- Runs within secure network and does not use external services

Service benefits

- Excellent ROI due to greatly reduced redaction time
- Full redaction functionality without leaving secure environment
- Enable any user to successfully redact video and audio
- Flexible redaction of video, video with audio or just audio

2. Service Definition

AI Redact is software as a service (SaaS). Anyone with a compatible browser and an internet connection can utilise the service.

3. Technical Requirements
