

Aperture Governance Studio

Delivering trust in your data

Data governance is a key enabler of success for data-centric organisations. With data at the heart of modern business, serving as the fuel that drives thinking, planning and decision making, the ability to successfully manage your data estate is fundamental to innovation, collaboration and success.

Well managed data can be optimised to power all business processes, from sales and marketing to delivery of products or services, managing staff and paying suppliers. Data drives efficiency, income, compliance and customer satisfaction. It is an organisation's most valuable asset, and if governed well unlocks success for the business.

Transform your data

To maximise data's potential, it's vital that organisations correctly manage and control it. Against the backdrop of increasing data volumes, regulatory complexity, demanding consumers and the drive for data democratisation, the businesses that succeed are the ones that understand and harness the power of their data. Data governance provides the framework that helps organisations achieve this.

Introducing Aperture Governance Studio

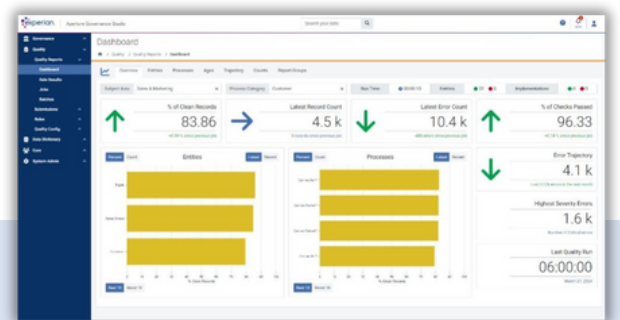

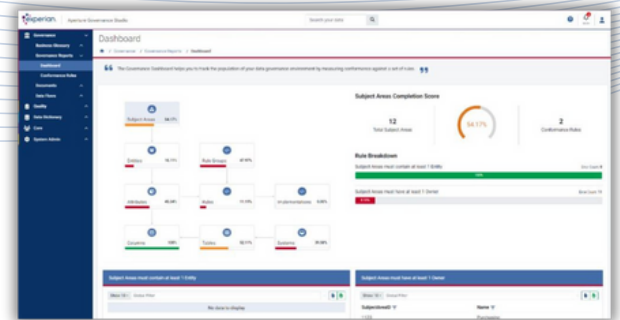

Aperture Governance Studio is a highly intuitive data governance solution that works across all sectors. Easy and fast to implement, it brings clarity and understanding to an organisation's data estate in days, not months, with a simple user-friendly interface that makes sense of data for users at all levels whether they are technically minded or not.

Find, track, understand and manage data across your business, building an accurate picture of what data assets you have, how data moves around and how it is used. Uncover hidden data challenges, identify the impact of data on business processes, produce reliable information, and anticipate and solve problems.

Aperture Governance Studio: drive business success with well managed and controlled data that you can trust.

Key features

- ✓ **Business Glossary:** set an agreed definition for all data items and build a glossary of key terms
- ✓ **Data Policies:** set and store all policies in a single go-to repository
- ✓ **Data Ownership:** see clear multi-level ownership of data across your business
- ✓ **Data Automation:** assign tasks and monitor progress
- ✓ **Data Events:** record breaches and data protection issues in a single, auditable location
- ✓ **Impact Analysis:** identify the impact of data quality on business processes
