- Optimised user experience

4. Service Scope

Get more from your data

Experian Installation Service is where a member of the professional services team will perform the installation of the purchased Experian product. The consultant will provide information about different installation options, best practices on how to keep your application updated and how to get the most out of

the product. The consultant will discuss installation options to ensure the product installation is future proofed.

4.1 Implementation - Solution

Deployment

Deploying new solutions into your environment(s) can be a time-consuming process, often involving the co-ordination of resource from many different departments. Such changes, no matter how big or small, always carry a degree of risk, particularly when it comes to a live environment. Experian Data Quality Professional Services can assist with every stage of deployment whether it is initial product installation into your development environment, end user training, assisting your developers with some integration work or the migration of a solution from one environment to another. This all helps to greatly reduce the time required to implement a solution and minimises the risk of disruption or downtime during the process. It will mean that your project team is free to focus on the tasks that they do best and don't need to waste time learning the in-depth technical detail of the Experian Data Quality products you have purchased.

What do I need for the service?

Prior to visit by the Consultant

Project defined with timescales and your resources who will oversee the product installation are assigned.

☐ Signed Statement of Work outlining the services agenda which will need to be discussed with the your project team ahead of the session.

During the site visit

☐ Necessary hardware is set up and ready for the installation to take place.

☐ The team or individual who will oversee the installation of the Experian product are present for the installation.

☐ If additional staff are required to gather information from or share knowledge with, they will need to be available as required. This can be outlined in the agenda so that the person can schedule that time to be available.

What do I get from the service?

Knowledge of Functionality

Gain a full understanding of the functionality behind the Experian solution, how it works and how best to configure the solution to meet your business needs.

Achieve Best Practice

Advise and set up configuration of the address layouts, Experian datasets and live deployment requirements.

Prepare for the Future

Advice on how to handle future expansion so extra datasets or countries can be added with the aim to provide you with the knowledge to manage the Experian products as required.

Support Your Procedures

Ensure that internal procedures are created for updating and supporting the solution.

What are the benefits?

Minimise installation impact

The consultant will discuss different options available to ensure the product is rolled out with minimal impact on the business and provides advice on installing the product in bespoke scenarios.

Advanced configuration

The consultant can set up advanced configuration settings to get the most out of the product and provide full knowledge transfer to the required members of staff.

Expedited installation time

Experian Technical Consultants will speed up the time it takes for the product to get set up and running for your business and provide the relevant individuals with the knowledge they need to maintain and repeat the process where required. Right first time Installation and configuration service will make sure installation is “right first time” and avoid potential delays to projects.

Our data expertise

Experian Data Quality Professional Services process, analyse and transform data daily. Through a method of cleaning, standardising, de-duplicating and suppressing, our consultants can create a single customer view of your specified data or simply ensure you have accurate and up to date data in your CRM or marketing database. Our hands-on experience with data means that we are best placed to provide advice and guidance on how you should manage your data whatever your business needs may be.

Data processing

We recognise that your customer or supplier data is one of your most valuable business assets and will often be in a format that is unique to your industry sector or business. You will have spent many years gathering and using this data and we want to ensure that any work that we do on your data enhances its usability and usefulness. We are comfortable working with large or small data volumes in many different formats and file types, and we will work with you to define exactly how you want any data processed by us to be returned to you.

Data Management Services

We work with a wide range of reference data for the UK and most of countries across the globe. Examples of this data include consumer and business names, addresses, emails and telephone numbers. Consultants can assist with one-off data services or work with you to continually ensure your data is processed on a regular basis. However, you wish to engage with us ensuring your data is transferred to and from us securely is our number one priority.

Once data is in the required format we can then use some of our many additional reference data sources to help you make crucial business decisions by appending grid co-ordinates for use with mapping tools, geo-demographic profiles to enable customer segmentation and many more data elements.

Data migration

Whether upgrading to a new version of a database or application, switching to a new system or consolidating data silos, our consultants can assist in the migration of your data to streamline your data migration project, reducing the complexity, risk, cost and time involved, and therefore minimising the impact to your business operations and application availability. Consultants utilise integrated services, products and data to help you

migrate your data irrespective of your storage environments whilst also providing the opportunity to evaluate and improve the quality of your data.

Data governance & strategy

If you or your organisation is investing time, effort and money on a data quality solution then we encourage you to look at implementing a data governance framework to help protect any investment made in your data quality solutions. By ensuring that the processes, policies, security and management of your data follows a best practice framework it will help ensure consistency across your organisation and drive better data management practices. Better data management practices ensure that you are making business decisions from up to date data which will ultimately drive growth for your business.
