

Experian Data Migration Delivery Services

Partnering to deliver a successful data migration

The success of a data migration depends on having a clear understanding of your source data landscape, profile of your data and a high level of data quality. Poor data quality can compromise or even cause a migration to fail. Therefore, focusing on your data before, during and after the process is fundamental.

Preparing for and successfully executing a migration is a complex, intricate process. Experian's dedicated, expert data migration consultancy team have vast experience across different sectors, systems and organisations, and can support clients at any and all stages of the process

We help with:

Business Data Readiness: understand the data landscape, data quality and identify potential migration challenges

Scoping: define the breadth and depth of data to be migrated and generate a data migration register

Extraction: extraction of data from legacy applications, systems and databases to your own schedule

Cleansing: review and cleanse your data to improve quality and resolve issues before migration

Transformation: assign identifiers, convert data types, split, combine or convert data and more

Obfuscation: disguise and anonymise personal data, while ensuring it remains useable for testing purposes

Mapping: accurate, precise and consistent source-to-target mapping

Reconciliation: automated data checking and reconciliation to ensure a migration has worked as intended without draining resource and time with manual checks

Loading: deliver data in the required format to avoid data corruption and warranty breaches

Benefits

- ✓ Accurately measure Data Quality across all systems
- ✓ Unique public sector data quality rules library for low-cost, rapid deployment
- ✓ Determine financial and process impact of data quality to aid decision making
- ✓ Implement data quality root cause analysis tools and error profiling
- ✓ Leverage AI data profiling to discover patterns and issues within data
- ✓ Delivery of complex data projects remotely
- ✓ Delivery of clear insight and analysis for users

Why we're different...

Highly collaborative: we get to know you, your vision and your data, so our work is aligned with and closely tailored to your business

Results focused: we'll help you rigorously plan and implement your data migration to safeguard your business from risk and ensure success; and we can help you design the structure and controls to maintain good standards

Industry experts: our consultants are recognised not just for their detailed subject matter expertise, but also for their flexibility, creativity and pragmatism

Scalable: whether you're migrating a small or large volume of data, our team will provide the structure and support you need to manage and control the process, and trust your data at the end of it
