

Network Device and Firewall Ruleset Review

Thorough and trusted device reviews of system configurations, patching and firewall rulesets, performed to identify deviations from best practice that could lead to security compromise. Identifying misconfigurations in network infrastructure such as Switches, Routers and Firewalls that could be leveraged to compromise the security of the environments these devices support.

Features

- Assessments conducted by CREST, Cyber Scheme and CHECK certified specialists
- Identify security misconfigurations in devices such as switches, routers and firewalls
- Real time actionable intelligence, security posture assessment
- Highly experienced, SC and DV-cleared security specialists
- Team in operation for over 28 years
- Full reports, delivered securely, detailing vulnerabilities prioritised critical to low

Benefits

- Identifies how real-world attackers would compromise your organisation
- Experts provide evidence-based identification of organisational, critical business risks
- Provides a prioritised recommendation and guidance to fast-track remediation
- Assures effectiveness of technical controls and third-party investments
- Quickly increases organisational resilience by benchmarking against best practice
- Increases assurance through real, actionable intelligence against security posture
- Outstanding value for money from limited cyber security budgets
- Satisfies mandated and compliance requirements
- Optional supporting security services to assist clients where really needed
