

Open-Source Intelligence

OSINT is an exercise simulating the activity performed by a threat actor as a precursor to performing a targeted attack. QinetiQ's Security Specialists examine the information available in the public domain, highlighting material that is actionable, or which could be combined to create more complex cyber-attacks.

Features

- Detailed overview of an organisation’s digital footprint
- View your organisation from a threat actors perspective
- Actionable intelligence in real time
- Understand your organisations public exposure
- Understand how an organisation is publicly linked to supply chains
- Provides real, actionable intelligence against security posture
