Company overview

We're driven by technology and innovation, and by their ability to create meaningful change for organisations and the communities they serve. As a proudly independent and employee-owned consultancy, we bring together a diverse, highly skilled team who thrive on tackling complex challenges, working closely with our clients to deliver solutions that make a real difference.

We partner with organisations across multiple sectors, using data, AI and digital to help turn ambition into outcomes. Our work is recognised by leading industry bodies, reflecting our consistent focus on delivering clear, customer-centred results that stand up in the real world.

How we do it

With over 25 years of experience delivering digital transformation, Answer Digital supports organisations through complex change, with deep expertise in cloud-led delivery. We work in close partnership with our clients to innovate responsibly, embed best practice, and deliver outcomes that last.

Every engagement is different, so we build teams around the challenge, not a fixed model. We start by understanding the vision, the users, and the outcome that really matters. From there, we design solutions that fit your technology landscape, tools, roadmap and people.

Collaboration sits at the heart of how we work. We establish ways of working that are sustainable for teams, processes and practice, then iteratively design, build and test together. We continuously learn, refine and evolve, keeping a clear focus on delivering the right outcome, not just shipping technology.

Cloud Data, Analytics and Platform Consulting and Development

Service description

We design, build, migrate and support secure cloud data platforms across AWS, Azure and GCP. Delivering modern lakehouse architectures, analytics, BI and data governance for Government and Healthcare. Enabling actionable insights, scalable performance and regulatory compliance through expert data engineering and platform optimisation. Delivered using Answer Digital's agile, product-led engineering approach.

Features

- Cloud-native data warehouse design: Snowflake, Synapse, Databricks, Fabric.
- Real-time visualisation and dashboarding using Power BI and Tableau.
- Automated ETL/ELT pipelines for seamless data ingestion and transformation.
- Infrastructure as Code (IaC) deployment via Terraform and Ansible.
- Advanced predictive analytics, machine learning, and AI model integration.
- Secure Identity Access Management (IAM) and RBAC for governance.
- Scalable Big Data architecture supporting petabyte-scale data growth.
- DevOps-driven CI/CD pipelines for agile delivery and deployment.
- Cross-cloud migration strategy for AWS, Azure, and GCP environments.
- Data quality assurance, lineage, and catalogue implementation.

Benefits

- Gain actionable insights for evidence-based strategic decision making.
- Reduce operational costs by decommissioning legacy on-premise infrastructure.
- Enhance data governance and ensure GDPR and ISO27001 compliance.
- Create a single source of truth unifying disparate data sources.
- Accelerate reporting cycles with automated real-time business intelligence.
- Scale resources elastically to meet fluctuating organisational data demands.
- Empower teams through expert knowledge transfer and upskilling workshops.
- Mitigate risk with robust disaster recovery and security protocols.
- Optimise performance using best-practice cloud architectural patterns.
- Support digital transformation with agile, user-centred delivery methodologies.

Pricing

Answer Digital services are available for procurement through either Fixed Price or Time & Materials arrangements. Please refer to our Pricing Document and Rate Card for further details.
