Pricing Document

CONTENTdm – Pricing

Annual subscription pricing for CONTENTdm is currently based on a combination of a Base Fee relating to the size of the institution (up to £10,690.23 p.a. for 'large' institutions) and a Collection Size cost (for example £9,055.05 p.a. for a collection size up to 2TB). Preservation options are also available upon application.

The pricing subscription model relates to the full-time equivalent and is adjusted according to the size of student population in the higher/further education sector or population of authority in the public library sector.

Additional consultancy is available at the rate of £944.00 per working day. Expenses/travel and subsistence will apply if OCLC staff are required on-site.

Pricing excludes VAT.

Pricing includes:

- A CONTENTdm site
- Project Client workstation software for collection building (no limit on number of workstations)
- GB storage based on collection size
- 30GB preservation archive size
- One 1 OCR unit (can process up to 10,000 pages per month, and can be installed on any single Project Client workstation)
- Support and training services
- Access to the CONTENTdm Community Center:
<https://www.oclc.org/community/home.en.html>

OCLC has attached the applicable terms and conditions and would expect that any resultant contract would consist of mutually negotiated terms and conditions between the parties.

Therefore, before any legally binding commitments are made by OCLC, OCLC and the Customer will need to work out a mutually acceptable contract.

Please note that CONTENTdm can be purchased as an individual service, but it can also be acquired together with OCLC's WorldShare® Management Services (WMS).

Please see the relevant service definition and pricing documents for more information on these services.
