

SPLUNK CONSULTANTS

Collaborate with some
of the UK's best Cyber
Security Experts to
meet your needs.

SERVICE OVERVIEW

CND are one of the UK's oldest cyber security firms with extensive experience in delivering a wide range of services – from assessing to detecting and preventing cyber security risks.

Our cyber security consultancy service offers clients intimate and tailored consultation sessions with our team of trained experts for any of their cyber security needs. In addition to having access to our experts and their vast knowledge of the industry, clients can also benefit from our vast pool of associates, each with eclectic and specialised skill sets.

DELIVERABLES

The deliverables will be tailored to the client's needs, and may include, but not be limited to:

- Consultation on specific tool/product sets.
- Specialised support on systems not operating at full capacity.
- Subject Matter Experts covering all aspects of cyber security.

SERVICE DETAILS

Step One: You will be assigned a Service Delivery Manager who will work with you to capture your specific requirements and the skills required to fulfil them.

Step Two: One of our Principal Technical Consultants will recommend a course of action to meet your needs.

Step Three: You will be assigned an expert who will deliver your needs. If our own staff are fully utilised or do not hold some of the niche skills required, then the requirement will be passed to our resourcing team to find a suitable person or persons from our Associate Pool.

For more complex deliveries and subject to approval from the client, we may suggest that the specialists change as the delivery develops. For example, an architect may be replaced by an engineer to implement the solution, who may be replaced by a product specialist to tune the delivery and then by a security analyst to monitor and fine-tune the system.

PRICING

Variable depending on skillset required and duration of the engagement.

Prices start from £800 per consultant per day depending on client's requirement, size and scope.
