

# MANAGED CYBER EDUCATION SERVICE

Creating a human firewall  
ensures the security of  
your organisation's digital  
information

## SERVICE OVERVIEW

Our Managed Cyber Education Service (MCES) is designed to enhance your organisation's cybersecurity posture by educating employees and reducing the risk of phishing attacks.

As part of the service, we conduct regular phishing simulations which mimic real-world phishing attacks, to test and improve your employees' ability to recognise and respond to phishing attempts.

We also create tailored training programmes to educate employees on the latest phishing tactics and cybersecurity best practices.

## DELIVERABLES

1. Up to 12 phishing scenarios sent to employees over a 12-month period.
2. Regular training campaigns at preferred frequency (e.g., monthly, quarterly).
3. Customised reports including industry benchmarking for both phishing scenarios and training campaigns.

## SERVICE DETAILS

When we conduct a phishing simulation, we send a realistic phishing email to employees within your organisation to test and evaluate their awareness and response to phishing attempts.

Our consultants will discuss your concerns around phishing and the output is a campaign to not only assess the likelihood of staff falling victim to phishing but more importantly to educate them about phishing techniques and how they can identify and thwart an attack.

To supplement the education provided by the phishing assessment, our consultants create tailored training programmes which include a series of modules and interactive sessions aimed at educating employees on how to identify suspicious emails, secure their workstations, protect sensitive data, and follow protocols for physical security, such as access control and visitor management.

## PRICING

The price for this service is determined by undertaking a detailed scoping call or meeting to discuss your requirements and will depend on the number of users and length of subscription.

The Managed Service offering will vary in price depending on number of users, full demos can be provided by the vendor upon request.
