

PENETRATION TESTING

Discover your network vulnerabilities from the perspective of an attacker.

SERVICE OVERVIEW

A Penetration Test or “Pen Test” will try to attack and penetrate your systems using the same tools and techniques that a hacker would. These are mostly manual.

If vulnerabilities are found, an attempt will be made to exploit them, enter the exposed system, and where permitted move laterally through your network.

DELIVERABLES

1. A report on the findings of the penetration test.
2. Recommendations on what you can do to remediate any problems which were identified.
3. Our consultants will also be on hand to explain the report and assist in remediation if required.

SERVICE DETAILS

Our consultants will work with you to identify the scope of the test and discuss the various options available to you. We will also look at your timescales and match your needs to one of our testers.

Unlike a hacker, our testers have very strict rules of engagement and a scope defined by you within which to work. Our experts will liaise with you before transgressing from the scope to ensure your systems are not harmed and that you are comfortable with their actions.

Industry best practice suggests that you use a different Penetration Testing team for each test, which are usually undertaken at least annually. As a result, we have partnered with various third-party consultants to deliver CHECK, CBEST, CREST and TigerScheme Penetration Testing.

PRICING

Prices start from £1,200/day and per consultant.

You will be asked to complete an online requirement capture form in order to quote an exact daily rate. This could be up to £2,500/day should the test need to be completed out-of-hours.
