

VULNERABILITY ASSESSMENT

ADHOC AND CONTINUOUS

Assessing your network
and systems for
vulnerabilities that could
be exploited by an
attacker.

SERVICE OVERVIEW

A Vulnerability Assessment (also known as a Scan or VA) is a mostly automated test of computer systems which looks for vulnerabilities that could be exploited by an attacker.

Unlike a penetration test (pen test), it does not try to exploit any vulnerabilities found, but instead reports on them. This approach reduces the risk of service outage.

As Vulnerability Assessments are mostly automated, many systems can be checked at a time, making them extremely cost effective.

You may opt for an External, Internal or Web Application Scan.

DELIVERABLES

1. After each scan, you will receive an automated report on the findings.
2. If further analysis is required regarding the report or remediation, remote consultancy is available at £100/hour.

SERVICE DETAILS

CND offer comprehensive vulnerability assessments of your chosen environment to cover a multitude of common threats. To do this manually would take hours per host, however, our automated scans undertake the checks in a fraction of the time and without the risk of human error.

We also offer credentialed/ internal scans whereby we log onto each system for more thorough, internal investigations. From there, we can run tests that identify issues and check that the systems comply with a number of cyber security standards. Please reach out for specific pricing.

PRICING

		Frequency		
	Number of IPs / URLs	Adhoc	Monthly (per year)	Weekly (per year)
External VA	<50 IPs	£500	£3,500	£4,500
	51-250 IPs	£750	£5,000	£6,000
	251-500 IPs	£1,000	Enquire	Enquire
	501-1000 IPs	£1,250	Enquire	Enquire
	>1001 IPs	Enquire	Enquire	Enquire
Web App Scan	1 URL	£300* £150 / additional URL £50 / user role	Enquire	Enquire
If further analysis is required regarding the report or remediation, remote consultancy is available at £100/hour.				

*Includes credentialed scan of first URL, limited to 300 pages
