1 RATE CARD

Precision is based on a combination of Software as a Service (SaaS) and Data Science as a Service (SaaS) models. All deployments are evaluated and priced individually, with both delivery and ongoing licensing costs derived based on customer requirements. This can vary from small-scale, entry-level deployments to complex, enterprise level solutions.

Factors which impact the complexity and therefore pricing of the service include the following:

- **Data input method** (i.e. manual entry, batch, real-time, hybrid)
- **Volume of submissions**
- **Frequency and number of recalibrations**
- **Predictive model complexity** (i.e. requirement for ensemble modelling)

The commercials for the entry level Precision service include:

- **Software Service Subscription** (one predictive analytical model addressing the problem specified with twice yearly recalibrations)
- **System Integration & Implementation Support** (overall management of solution implementation and business requirement modelling conducting by the SSL Data Science team)
- **Data Centre, Infrastructure and Platform Services** (the Precision solution architecture)
- **Data Processing and Monitoring** (automated loading and processing of data)
- **Service Support** (leverage the collective experience of our dedicated Data Science team and the ongoing assistance from the Application Support team)

As standard the solution will receive regular upgrades providing all bug fix, performance improvements and general product enhancements. For large scale product changes (including the creation of new applications or significant alterations to the code base or functionality), each request will be evaluated and a pricing proposal will be created and.

To obtain costs please contact Synectics Solutions via:
