

Quadient Cloud MailMark

Postal Tariff Optimiser
G-Cloud 15 Pricing Document

Quadient DQ Cloud Mailmark (option with Quadient Impress)

DQ Cloud Mailmark is an added option to the Quadient Impress product. Quadient Impress allows centralisation of outbound communications, one option is to manage and send physical letters. Royal Mail, Whist, UK Mail and The Delivery Group all offer levels of tariff discount. From Business Mail Advance to Mailmark Low sort, all rely on a complex framework based on 'highly machineable mail'. The DQ Cloud Mailmark product offers push button compliance from address formatting using Postcode Address File 'PAF', Delivery Point Suffix 'DPS' generation, Mailmark and sortation while removing the user complexity, all within a simplified GUI based workflow.

DQ Cloud Mailmark is priced based on outbound letter volume, not pages within each letter. Each letter constitutes an address and is therefore 1 click. The minimum term is 1 year, with a maximum of 3 years. The price is based on 1 user and the onus is on the customer to declare number of users accessing the feature.
