

Colocation: take your IT infrastructure beyond the cloud

Businesses choosing colocation face tough hurdles: skyrocketing energy costs, demands for scalability, and navigating intricate data protection laws. They must sift through a crowded provider market, each with unique offerings. With tech advancing, the pressure's on to embrace low-latency edge computing, hybrid infrastructure, and ironclad security. All this while ensuring uptime, cutting costs, and hitting sustainability targets.

Colocation gives you all the efficiency and security of managing your information in a private and secure data centre – without the costs of building and maintaining your own infrastructure. More and more businesses are rediscovering colocation. For some, it's the answer to spiralling cloud costs, and for others, a hybrid infrastructure that's easy to flex and scale as their business changes.

With us, they're enjoying 24/7 monitoring, advanced physical security, 99.99% uptime and total compliance with UK data protection regulations.

Is colocation right for you?

- Are you looking for a way to move all or some of your applications to a private environment?
- Would you rather free up valuable resources from managing your own IT infrastructure?
- Are you looking at ways to improve your disaster recovery plans?
- Is it time to review your IT infrastructure?
- Are you looking for ways to improve your sustainability and meet ESG goals?
- Are your cloud operating costs getting too high?
- Are you struggling with data protection compliance with your cloud provider?
- Do you have security concerns around the public cloud?

Why Wavenet?

With more than 30 years of experience in designing, deploying, and managing data centres, we offer 11 strategically positioned locations designed for superior resilience, security, network coverage, and power availability. These facilities are perfect for primary and disaster recovery solutions, delivering 99.99% uptime in compliance with the Uptime Institute's Tier 3 Operational Standard and running entirely on certified green energy. As your provider we are always looking at new sustainable technologies and planning for continuous improvement.

What we offer:

- Colocation services
- Network services
- Cloud connect services
- Monitoring
- Power-to-rack monitoring as standard
- Monitoring devices in rack (depending on your security needs)
- Remote hands and technical services

Networks:

- Fixed price
- Resilient, high-capacity, low-latency connectivity with 99.99% uptime
- Network security
- Carrier neutral
- Well-connected to major internet hubs in the UK
- All sites served by a variety of connectivity providers
- Can connect to major public cloud provider

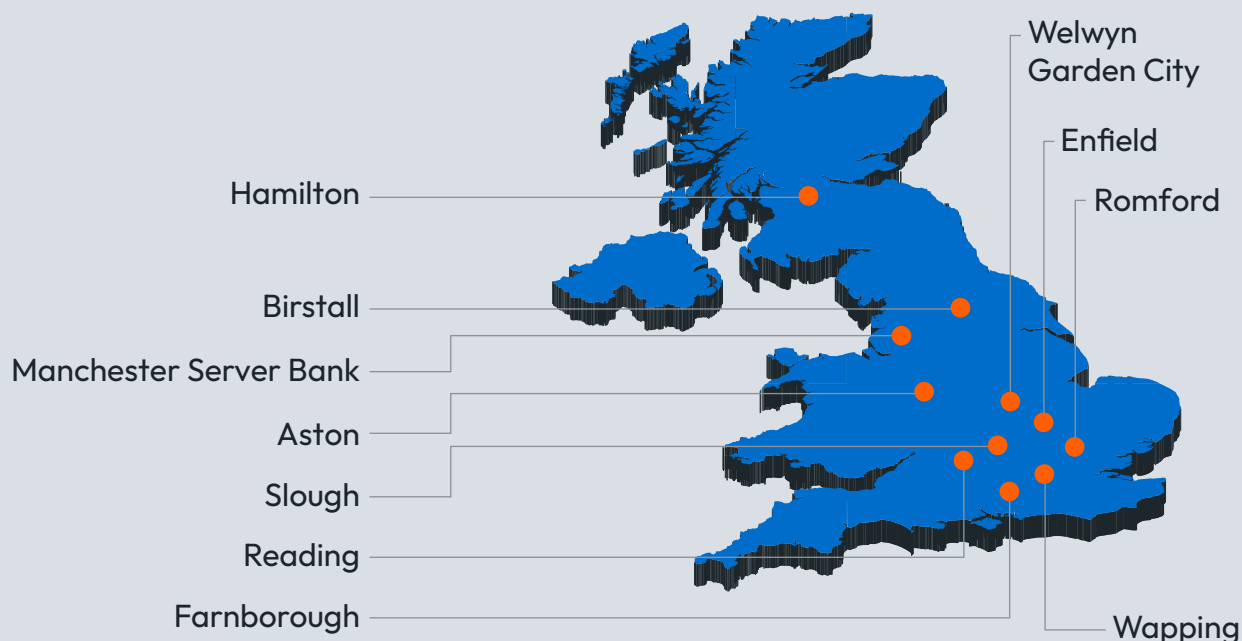

We can also work with you to offer tailored solutions:

- Bespoke design, build and management
- Lift and shift services
- Data centre relocation
- Data centre consultancy
- Managed services (cloud, cyber security)
- Project management

What you'll find on site:

- Access to Tier 1 providers
- Direct access to cloud platforms (Cloud Connect) so your data never hits the public internet
- Diverse fibre ingress points and diverse routes from carrier racks and meet-me racks as standard
- Fully controlled environment with 99.99% Power SLA
- N+1 cooling (electrical and pipework)
- Dedicated substations on site
- Each rack is designed up to 7KW with A and B power feeds (higher capacity available on request*)
- Green and renewable power contracts
- 2N electrical infrastructure
- Build room / storage and work areas included (at a cost*)
- 24/7/365 access
- Full coverage CCTV and door access controls
- ISO9001:2015 and ISO27001:2022

Have you thought about...?

Connectivity

We can also help you with cost-effective, manageable and flexible connectivity. Our SD-WAN and MPLS-based networks deliver Quality of Service over the core network so that applications and data can be prioritised according to the importance of the business.

Security and disaster recovery

Allowing your business to offload day-to-day operations.

Cloud Assessments

Our cloud assessments help you to receive the greatest possible value from your cloud investments.
