

Welcome to Infoshare+

Infoshare+ is a UK data and software company aiming to make local public services seamless and connected with the communities they serve. We believe digital should be a shared environment, supporting consistency, efficiency, and better outcomes for all. With our platform of innovative digital solutions, we're a trusted partner to hundreds of public sector organisations across social housing, local government, and social care.

MobileSurvey

Tablet-based condition surveys on site

MobileSurvey runs on tablets or portable devices running Windows OS. It allows surveyors to record condition survey data on-site and master system data is exported from AssetManager into MobileSurvey to configure it identically to the Condition Survey module. It exports XML files, which can then be imported into AssetManager.

Why choose MobileSurvey?

Export configuration from AssetManager

MobileSurvey imports master configuration data straight from AssetManager, ensuring surveys are captured using the most up to date system data.

Collect data on site

No need to capture survey data on paper – MobileSurvey works on portable Windows devices such as tablets to enable collection of survey data remotely.

Export data in a format accepted by AssetManager

Data is exported in XML format which can be loaded directly into AssetManager, ensuring no loss in data quality between devices.

Features

- Allows surveys to be completed in real-time with mobile devices
- Enables survey completion without an internet connection
- Ensures data collected is accurate and consistent

Benefits

- Speeds up data collection and processing
- Reduces the need for paper forms thus minimising administrative costs
- Surveys can be filled out on-site or remotely, increasing flexibility
- Data validation against AssetManager ensures collected information is consistent
- Data import into AssetManager facilitates data collection and reporting
