Bus Registrations and Publicity

Accurate, consistent, and well-governed service data is fundamental to delivering reliable public transport. Local Authorities, operators, and industry partners depend on high-quality registrations, schedules, and timetables to support network planning, passenger information, real-time systems, and operational decision-making. Without a single, trusted source of truth, data becomes fragmented, errors multiply, and passengers receive inconsistent information.

Novus Data Manager is Trapeze's core data management platform, designed to provide Local Authorities with a robust, centralised environment for creating, maintaining, and validating public transport service data. It streamlines the production of registrations and schedules, enforces data quality, and ensures compliance with modern industry standards such as TransXChange.

By acting as the foundation for the entire Novus product suite, Novus Data Manager ensures that downstream systems—from journey planners to real-time prediction engines and publicity tools—are all driven by the same authoritative dataset. This reduces duplication, eliminates inconsistencies, and improves the reliability of information presented to passengers.

Novus Data Manager integrates seamlessly with other Novus modules, enabling automated transmission of accurate data to journey planning services, real-time systems, and passenger information channels. When paired with Novus Publicity, authorities can quickly generate modern printed and digital outputs, ensuring that all channels reflect the same validated information.

As a low-cost, web-based solution, Novus Data Manager helps authorities reduce operational effort through automation, improved workflows, and fewer data errors. The result is a more efficient data operation and consistently reliable information for all stakeholders—supporting better passenger experiences and encouraging greater use of public transport.

Novus Data Manager - Core System

Pricing for the Novus-Data Manager core system, including Publicity, is based on data storage and system usage. Set up price covers implementation and yearly maintenance includes support, hosting, and annual licenses for up to 5 users. See the banding below for pricing:

Standard	Set up	Year 1 Maintenance	Year 2 Maintenance
Novus-FX Core	£63,000	£158,000	£165,900
Novus-FX Publicity	£54,000	£40,000	£42,000

Premium	Set up	Year 1 Maintenance	Year 2 Maintenance
Novus-FX Core	£84,000	£297,000	£311,850
Novus-FX Publicity	£76,000	£41,000	£43,050
