

Microsoft Dynamics 365 Business Central Migration

Migrating to Microsoft Dynamics 365 Business Central in the cloud brings scalability, enhanced security, and improved accessibility for your organisation. The cloud platform integrates seamlessly with existing Microsoft services, ensuring your data is secure and accessible to authorised users, wherever they are. Migration services encompass data transfer, system configuration, and user onboarding, designed to minimise disruption and accelerate adoption of new processes.

The migration process is managed following a waterfall methodology, where each stage is planned and executed in sequence to ensure a controlled and reliable transition. This structured approach helps manage risk and maintain project clarity from start to finish. Consultancy and migration support are provided on a time and materials basis.
