

Microsoft Dynamics 365 Customer Engagement CRM Cloud Migration Review

The CRM Optimisation Service is an ideal way to evaluate a potential CRM cloud migration.

If you are considering a move from legacy, on-premise CRM to CRM online then the Optimisation Service will help you to take the first steps in evaluating and planning the process, on a no obligation basis.

The Optimisation review can be targeted specifically at the key factors, challenges and risks involved in a cloud migration. This will result in a report and recommendations tailored specifically to your organisation's CRM cloud migration from an experienced and Microsoft certified consultant.

Although primarily intended for organisations wishing to migrate to Microsoft Dynamics 365 in the cloud from legacy Microsoft Dynamics CRM from on-premise, this service is also relevant for organisations with other legacy CRM systems.

Optimisation services are provided by Xpedition on a free-of-charge basis to qualifying organisations. Please contact Xpedition to apply for your Optimisation review.
