AI-Powered Exploits

New threat on the horizon

Research suggests OpenAI's GPT-4 large language model (LLM) can exploit real-world vulnerabilities after simply reading descriptions (CVE advisories).

Impressive capabilities

In a study, GPT-4 successfully exploited 87% of tested vulnerabilities.

Not just past vulnerabilities

It even tackled recently discovered vulnerabilities, showcasing its ability to adapt and learn.

Cause for concern

This raises concerns about attackers using AI to automate vulnerability exploitation, making it easier and faster to launch attacks. And this is already starting with few initial AI based or related attacks which cause a severe damage.

AI-Powered Remediation

Preemptive Security

Reducing the attack surface at scale

Diverse Fixes

Patching isn't the only approach

AI-Powered Defense Plans

Embedding business risk with remediation process

Pricing

GBP Pricing Per Licence Per Year

vRx Licenses*	Client Suggested Price	G-Cloud Discount	G-Cloud Price
1-199	£45 / Year	30%	£31.50 / Year
200-499	£40 / Year	30%	£28 / Year
500-999	£35 / Year	30%	£24.50 / Year
1000-1999	£30 / Year	30%	£21 / Year
2000-5000	£25 / Year	30%	£17.50 / Year
5000+	TBD	30%	TBD

The above pricing is for the vRx licenses (Per licenses per year)
Price for Vradar Licenses (Network Scanner), will be 5 gbp per IP per year

Superpowered Patch Management

Try vRx Free for 45 Days

Vicarius vRx is one of the most effective and easiest tools to deploy in your armoury against cyber attacks. It's more than just patch management - it's a full-stack vulnerability remediation platform offering:

- Automated patching across 2,000+ apps and OS
- Patchless Protection for zero-day and unpatchable vulnerabilities
- Script-based remediation for complex fixes
- Real-time asset visibility, contextual risk scoring, and automated reporting
- Discovery, prioritization, and remediation in one platform
- Supports Cyber Essentials Certification with ease
