SERVICE OVERVIEW

TALAN

PROGRAMMES THAT WORK FOR EVERYONE

At Talan, we believe that effective risk management is essential to the implementation of cyber and information technology projects and for the ongoing maintenance of safe and secure operational systems. Our service assesses and assures organisational and technical maturity against UK and internationally recognised standards and control sets, such as CAF, ISO, NIS and Secure by Design, protecting information technology assets in a demanding and connected landscape. We listen to our clients' challenges and requirements and then work closely with them to implement pragmatic, proportional and cost-effective solutions.

Providing Confidence To Make Better Decisions: Our assurance services help clients maximise their technology and minimise risks. We collaborate with the client to identify areas of risk and then develop and implement strategies and solutions to prevent or mitigate them. We use proven assurance methodologies and technologies to assist clients with business solution health checks and compliance reviews. Our service offering assists organisations to develop or enhance processes and procedures in order to ensure that they are robust, scalable and compliant to regulatory requirements and industry best practice. We have proven experience in designing assurance frameworks to best support our clients and provide a unique level of practical insight and experience.

Third Party Information Assurance: The increasingly extensive and complex nature of outsourcing arrangements means multiple different suppliers could be working with your organisation at any given time, with varying security and data protection implications. Managing this can be costly and time consuming and in response to an increased market need, Talan has been delivering tailored services to help organisations. Our Third-Party Information Assurance service provides a risk based, robust and independent assessment of your current and future third-party suppliers to protect against potential risks.

**WE KNOW
EVERY CLIENT
IS UNIQUE**

TALAN

OUR RISK MANAGEMENT SERVICE:

Primarily, we strive to listen and understand client requirements, understanding any limitations, whilst working to deliver your aspirations. Our Public Sector Cyber and Supply-Chain Security Risk Assurance service provides complete peace of mind that your organisation will be assessed against and comply with regulatory requirements, industry best practice and any, more bespoke, requirements. Talan's extensive experience within the public sector means we aim to ensure a trusted and collaborative working partnership, rather than becoming a barrier to organisational aims. Our services can range from one-off third-party risk assessments of a particular supplier or project, through to a fully managed service where suppliers are regularly audited based on risk classification. This then enables clients to identify trends and potential issues and maintain their own levels of compliance.

We will:

- Conduct an initial consultation - A comprehensive consultation to understand your organisation's risk appetite, specific needs, existing security infrastructure and potential vulnerabilities. During this phase, we would gather information about your organisation, business objectives, IT environment, and the specific threats or risks that are most relevant to your operational context.
- Conduct the implementation - Our team of expert consultants would work closely with key stakeholder and operational staff in order to deliver the best solution to the challenge. Providing key deliverables in accordance with an agreed schedule of works.
- Conduct regular reporting – Talan believes in transparency and empowerment. Regular updates would be provided that would outline the progress being made, any impediments, alternative options and strategic recommendations. At the completion of our engagement, a full debrief can be conducted in order to identify any lessons to be learnt.

A woman with dark hair tied back, wearing glasses and a dark jacket, is looking upwards with a focused expression. She is in a server room, with rows of server racks visible in the background. The racks are illuminated with blue and white lights, creating a bokeh effect. A semi-transparent purple rectangle is overlaid on the left side of the image, containing the text 'WHY TALAN?'.
