Training – 3 day private online course	per course	£8,292.00
Training – 3 day public course	per course	£1,904.00

Pricing Notes

- A site licence is provided for end-users with fixed and/or concurrent licences available for analysts. An analyst is a user who is providing support on behalf of the organisation.
- Further Asset Management asset packs can be purchased to extend beyond 10000 assets, with additions of 10,000, 50,000 and 100,000 available.
- A mixture of concurrent and named licences is feasible – so, for example, an organisation could purchase 30 fixed Service Management licences and 150 concurrent Service Management licences as part of the same contract. Volume discounts are available
- All prices are inclusive of support and maintenance and subject to a minimum annual system cost of \$20,000 per annum
- Ivanti Neurons for Discovery builds on the platform to provide network discovery (passive and active) with the guardrails increased to 200 ingress transactions / device / month. This module delivers accurate and actionable asset information in minutes and provides visibility in real-time using active and passive discovery and third-party connectors. These provide normalized hardware and software inventory data, software usage information and actionable insights to efficiently feed configuration management and asset management databases.
- Ivanti Neurons for Workspace builds on the platform to include Edge Intelligence, Edge Intelligence Alerting, Remote Control, User and Device actions on a 1:1 basis along with on-demand Neurons
- Ivanti Neurons for Self-Healing offers an army of automation bots to proactively detect, diagnose, and auto-remediate configuration drift issues, performance issues, compliance issues, and security issues for endpoints. Automation of routine tasks paves the way to creating a truly self-healing environment, reducing time, costs, and improving the employee experience.
- Ivanti Neurons for Spend Intelligence provides instant insights into your software landscape and application spend for on-premises, cloud, and edge environments to help you improve operational speed and asset visibility, utilization, and costs. Unlike complex software licensing tools, it's easy and intuitive to use, with faster time-to-value. Within minutes, get detailed analysis presented in engaging dashboards of your licenses, purchases, and instances to help you more effectively track purchase history, upcoming license renewals, contract expirations, and ongoing spend. Highlight potential overspend issues and opportunities for automated reclamation.
- For Ivanti Neurons there is a minimum purchase requirement of 200 devices.
- See the separate Service Definition document for what is included in the Solution Bundles.
- All Prices exclude VAT
