The Housing App

smarter property inspections

thehousingapp.com

Designed by professionals for professionals

The Housing App has been developed by housing professionals to ensure that inspections can be carried out in line with all the relevant government legislation. The hazards follow the 29 HHSRS hazards and the scoring algorithms follow the national averages set out in the national guidance.

Inspect using any mobile device

The Housing App empowers officers to capture defects, input property details and complete full HHSRS assessments from iOS or Android phones and tablets. Officers can inspect and record information from any location even without an internet connection. The app is built as a fully offline compatible solution with seamless real time data synchronisation.

contact information

Enjoy improved
workflow

Provide more accurate
'Property Description'
information

Employ automated data entry

When using The Housing App officers can take advantage of the automated data entry options within the app. Once a property postcode is entered into the app the postcode lookup will give the officer the option to select the address which will then automatically apply the UPRN of the property. This will allow the officer to automatically pull through the EPC information. When an officer is on site they can also use the weather lookup option which will give the temperature and weather conditions during the property inspection.

Secure case management

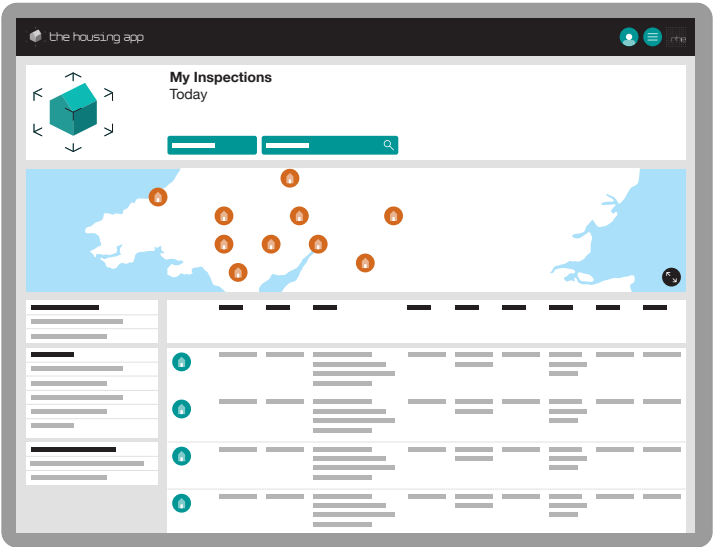

The Housing App can be accessed only by authorised users within your organisation. Administrators on The Housing App can invite colleagues and see all the cases that belong to the organisation. The Officer role allows a user to see their inspections only.

Review inspections from any location

Review and manage data and reports at home, on site, or in the office with our cloud case management platform. HHSRS assessments can be performed on our dashboard site for all the hazards picked up during the inspection. The scores and outcomes from these assessments will be displayed in a fully indexed HHSRS report downloadable as a PDF.

Enjoy the latest data protection

All data captured and stored on The Housing App servers are kept in line with government guidance on data protection. Each organisation can set nominated Data Protection Officers that can permanently remove data in line with their own policies on data protection. All data is stored in the UK using Amazon Web Services.

GDPR	Do it smarter	Go digital	Free trial
As the website has been designed for public users, we have made sure that it is compliant with all data protection laws, the most recent of these being GDPR. The Housing App users can request their data to be removed at any time. Data retention features allow administrators on the website to permanently remove data and inactive users that they no longer want to keep.	The Housing App delivers simple online property inspecting. The site has been developed to significantly reduce costs for housing services by making it easier to assess properties with support from our online helpdesk.	The Housing App can help officers speed up their inspections and standardise the way information is collected for property based inspections. The Housing App allows organisations to comply with government digital agendas and assists with local channel shifting policies.	If you would like to try out The Housing App, contact the RHE Sales Team to arrange a free trial. This will allow you access to the The Housing App website dashboard and app.

Key Features

Employ official HHSRS scoring	Create reports more easily	Employ offline compatibility	Set up inspections ahead of time
Log defects more easily	Share your team's inspections	Integrate UPRN, EPC and weather	
Upload pictures and documents	Update inspections on the website	Save time with workflow automation
