## NTT DATA Business Solutions

### We Transform. SAP® Solutions into Value

We understand the business of our clients and know what it takes to transform it into the future. At NTT DATA Business Solutions, we drive innovation - from advisory and implementation, to managed services and beyond, we continuously improve SAP solutions and technology to make them work for companies - and for their people.

Aiming to transform, grow and become more successful? We provide you with more than in-depth expertise for SAP solutions: As your passionate partner, we connect your business opportunities with the latest technologies – and offer you a unique approach to get the job done as smoothly as possible. Our close ties to SAP and other partners give you access to innovative solutions and developments. Being part of the global NTT DATA group enables us to master any scope of project.

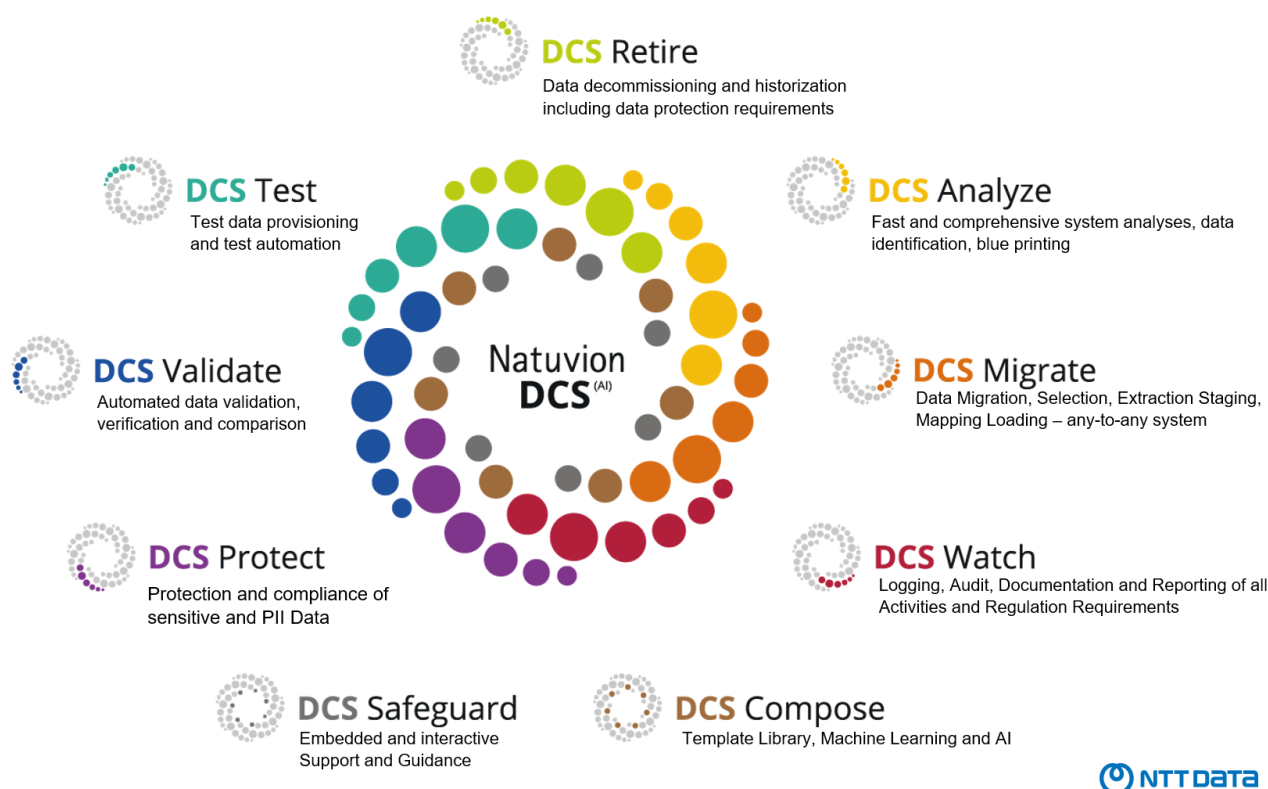

With operations in more than 30 countries, we have enabled thousands of companies become more efficient and effective during the last three decades. Our more than 14,000 experts around the world will also accompany you on your journey toward a truly intelligent enterprise – wherever you want to start! We have specialised in making SAP solutions work for companies – and for their people: We Transform. SAP® solutions into Value.

We are proud to be consistently recognised within the SAP ecosystem, having won multiple SAP accolades over the years. We are also delighted to announce our recent achievement of four SAP Pinnacle Awards in the categories of GROW with SAP, SAP Business AI Customer Adoption, Business Transformation Management, and Cross-Portfolio Success. These awards celebrate the exceptional performance of the world's foremost SAP partners, underscoring our commitment to excellence and innovation. With four wins and five finalist positions, we stood out as the leading winner in 2025. Additionally, our greatest asset and our most significant differentiator is our people. In 2025, the NTT DATA Group was named a Global Top Employer in 33 countries by the Top Employers Institute. This award highlights our dedication to creating a thriving work environment and confirms our status as a choice destination for IT professionals.

## Nativion DCS – Data Conversion Suite

The Nativion Data Conversion Suite (DCS) is a fully integrated product family designed to support every phase of your IT transformation – from the initial analysis and system migration all the way through to the decommissioning of legacy systems. With DCS, you can seamlessly manage data migration, integration, validation, and quality enhancement with a future-ready approach. Cutting-edge AI technologies empower you to quickly develop and implement migration, testing, data protection, and project management scenarios with confidence.

Nativion is an NTT DATA Business Solutions owned company, providing first-class software solutions to the wider NTT organisation and global partners and clients.

## Nativion DCS Analyze powered by Nativion DCS

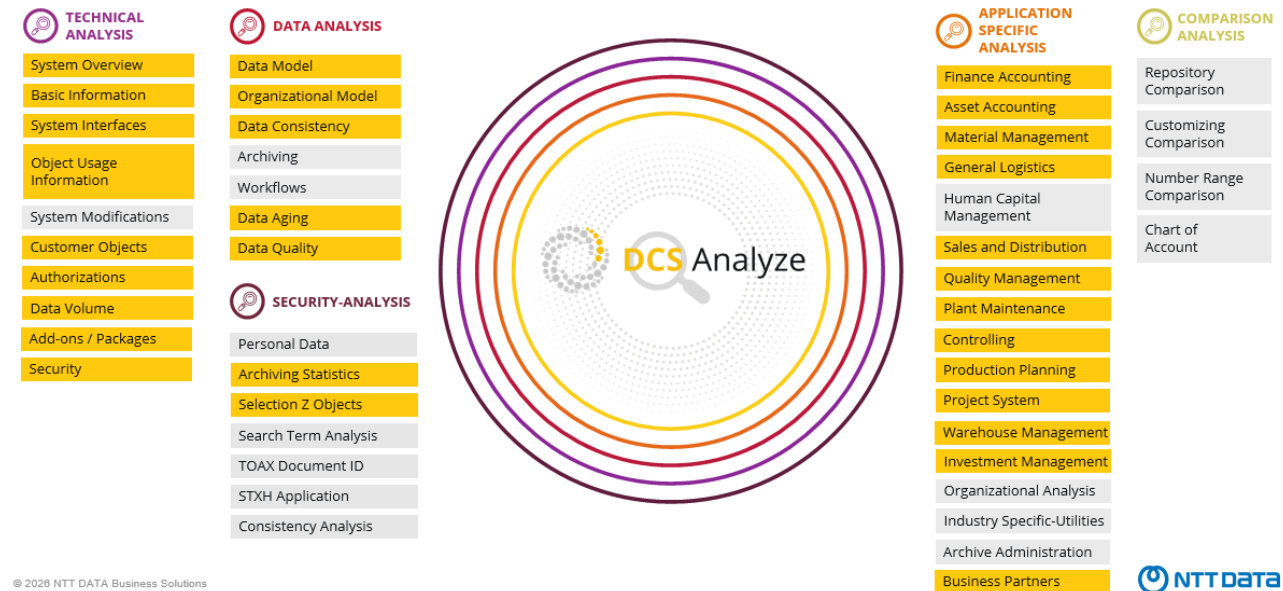

Nativion DCS Analyze is a system-oriented analysis platform that is easy to use and can be customized. With a catalogue of over 500 analyses in five different areas, a holistic system scan can be carried out and then evaluated. Nativion DCS Analyze offers various configuration options and selection filters to evaluate the analysis data in a cloud solution in real time. This evaluation can then serve as a basis for estimating the project costs or as input for the Explore phase in any type of migration projects, from ECC to S/4 system upgrade, Data Quality improvement projects, Carve Outs or even infrastructure lift & shift programs.

The modular structure of the analysis platform allows consultants to compile and execute a selection of relevant analyses on a customer-specific basis. Depending on the project status and progress, different levels of detail can be analysed. From a high-level overview of the organizational structure to a detailed analysis of the existing interfaces, all relevant factors for an migration are considered, analysed and conceptualized, for example the conversion of customer and vendors in an S/4 upgrade.

DCS Analyze is installed via standard transports and runs in Nativion's own namespace /NA2/ and can be executed in a current copy of the production system. The analysis takes a few hours to a few days, depending on the scope of the analysis and the size of the database.

The topics and analysis variety of Nativion DCS Analyze are sorted into a total of five clusters: security analyses, technical analyses, data analyses, application-specific analyses and comparative analyses.

An overview of the analysis topics in the individual clusters can be found in the following graphic:

*Illustration: Typical selection of Nativion DCS Analyze scope for a S/4 upgrade scan*

In addition to the standard SAP analyses such as the Readiness Report, DCS Analyze 500+ provides additional technical checks that provide the system integrator with all the data as input for the data relevant topics of an IT project.

The analysis phase for the planned migration project includes, among other things:

### Technical view & scope of analysis

- Current data volume, database growth and savings potential of the SAP systems
- Existing interfaces from the perspective of the SAP system to be analysed, including type, accesses and data volumes
- Quantity and scope of customer objects
- Overview of existing system modifications
- Scope of customer-specific developments and corresponding tables in customer-specific namespaces

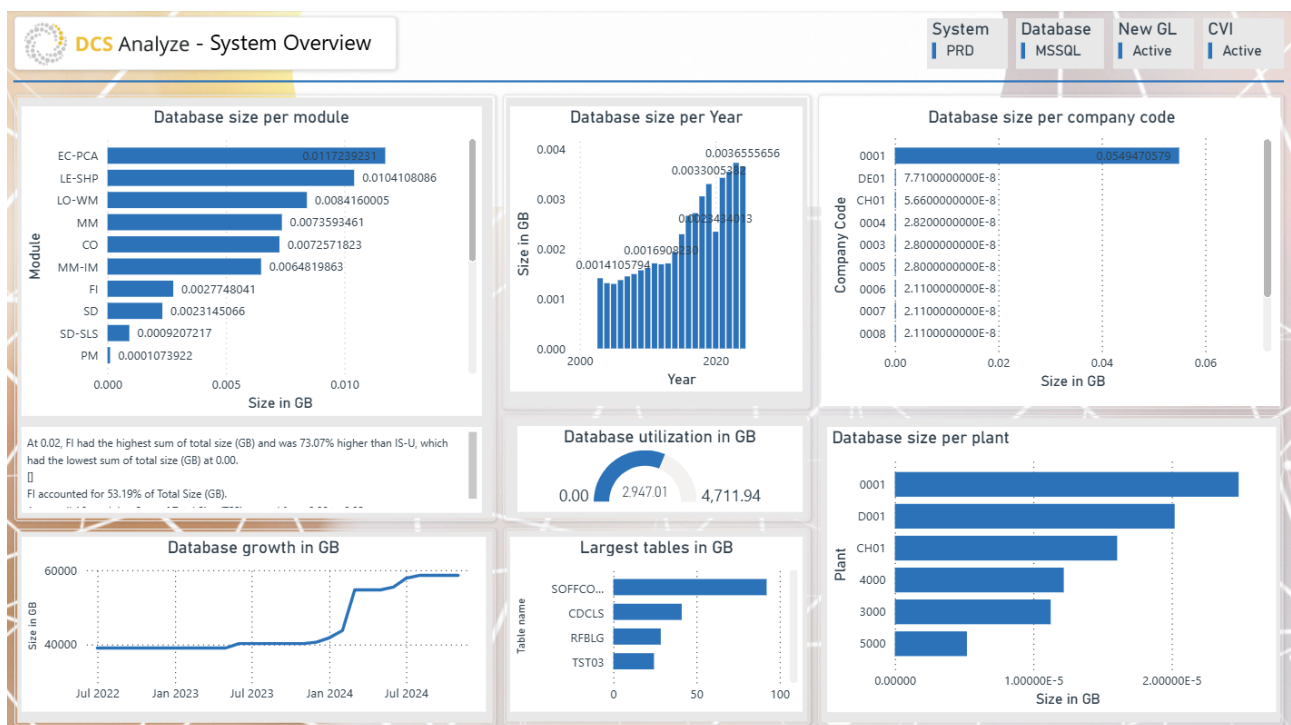

### Functional view & scope of analysis

- Detailed overview of the organizational units per SAP system including data volume analysis
- Modules used according to existing master and transaction data incl. data volume analysis
- Analysis of data aging of the organizational units
- Data quality and duplicate analysis of master data

### Transformational view & scope of analysis

- Overview of unused and existing customizing including consideration of differences / conflicts between source & target system
- Review of existing number range intervals on source systems and identification of conflicts
- Specific analysis for the introduction of the new general ledger and the new chart of accounts

A detailed compilation of the analyses and key topics relevant to this project will be agreed with the client as part of a scoping workshop. Any detailed analyses for the conception of the implementation project can be selected and carried out with Nativion's consultants. All analyses are made available to the client in the form of raw files (Excel output) as well as in our Nativion DCS Analyze Cloud for the entire duration of the project. The results can be discussed with the client in design workshops and then transferred to the implementation using Nativion DCS.
