JOUBINI

The Key EDI Platform for Integrating Business Partners, Systems & Authorities

Global support, maximum availability

Nowadays, a classic B2B/EDI connection is no longer a technical challenge. There are many providers that offer converters and services for technical implementation. However, significant differences exist not only regarding costs, monitoring, interfaces, and formats, but also regarding global support in terms of availability, service times, and languages. The problem is, with the requirements of modern, globally operating companies, EDI software on the market is usually too complex, too expensive, too confusing, and take up too many resources. Then what is the solution?

24/7

operating hours

One platform for all your EDI needs

JOUBINI is a state-of-the-art platform for the integration of business partners, systems, and government agencies. The solution can realize all integration requirements for the exchange of electronic messages and supports any type of data format, such as EDIFACT, VDA, ANSI X12. It facilitates the connection via standard communication protocols AS2, X.400, OFTP, and many more. The JOUBINI Portfolio consists of multiple scenarios to provide you with a central integration solution for any interface requirements.

JOUBINI is a cloud-based converter solution that can be used for all EDI processes independently of the ERP system. It is operated in the full-service, in the company's proprietary, certified data center located in Germany.

What makes JOUBINI so special: One platform for all scenarios

99.5%

availability and
24/7 operating hours

Any format, any platform, any business

In addition to the classic B2B/EDI requirements for connecting you with your suppliers, we offer a variety of other integration scenarios through JOUBINI. This means that we can provide our customers with a central integration solution for any interface requirements:

- JOUBINI B2B/EDI
- JOUBINI WebEDI
- JOUBINI E-Invoice: e-invoice integration for over 25 countries
- JOUBINI IoT Integration: integration of sensors and measuring devices via IoT adapters
- JOUBINI CEP Integration: integration of over 150 CEP and transportation service providers through the shipping logistics software TAMOYA
- JOUBINI Customs Integration: integration with public authorities through certified interfaces such as ATLAS or ELSTER-ERiC

JOUBINI B2B/EDI

With JOUBINI B2B/EDI, all integration requirements for connecting customers and suppliers for the exchange of electronic messages can be realized. The state-of-the-art platform supports any type of data format, such as EDIFACT, VDA, TRADACOMS, ANSI X12, XML, IDOC, etc. and facilitates the connection via standard communication protocols such as AS2, X.400, OFTP2, HTTPS, etc. In our own SAP- and ISO-certified data centers in Germany, we offer the highest security standards, with a 99.5% availability as well as 24/7 operating hours.

JOUBINI WebEDI

With JOUBINI WebEDI, all business partners can conduct standardized data exchange without costly implementation projects. The solution is part of the JOUBINI full-service portfolio. WebEDI is integrated seamlessly into your existing EDI system. You will place orders, for example, as usual which are then automatically forwarded to WebEDI, converted and made accessible to your suppliers via a browser-based portal. Responses are processed automatically and transmitted back to you in the required format.

JOUBINI E-Invoicing

The standardization of electronic invoicing is not a new topic. However, starting with the mandatory changeover in the B2G area, there will be a number of changes in the B2B and B2C areas in the coming years. By default, JOUBINI already covers the technical requirements for more than 25 countries via a central cloud-based integration platform with direct SAP integration.

No matter if you need ZUGFeRD in Germany, PEPPOL in Nordics, or a KSeF integration in Poland, JOUBINI got you covered.

100%

independent

JOUBINI IoT Integration

Our full-service cloud platform enables the integration of IOT sensors via the protocols MQTT und OPC UA. JOUBINI takes on the task of collecting, processing and writing back data for your IoT devices, ensuring efficient and state-of-the-art IoT connectivity.

100%
certified solution

JOUBINI CEP Integration

Together with our shipping logistics solution TAMOYA, JOUBINI is the future-proven cloud-based EDI integration platform for the connection to over 150 CEP and transportation service providers. With this dynamic duo, you are not only seamlessly connected but also able to conduct EDI in all formats like EDIFACT, FORTRAS, XML and all standard EDI protocols.

JOUBINI Customs Integration

JOUBINI Customs Integration is the solution for SAP GTS to connect to German Customs. JOUBINI supports you in electronic data exchange with German Customs and assures that all your export data is transferred smoothly. The ATLAS integration of our software is certified in accordance with AES 3.0. Next to the ATLAS integration, JOUBINI Customs also supports DMS Integration for Denmark.

JOUBINI stands for state-of-the-art EDI, transparent monitoring, and user-friendly interfaces

User-friendly interfaces and transparent monitoring

Our focus lies on intuitive interfaces for administration, configuration, and monitoring for every target group. Thus, JOUBINI is characterized by user-friendly and modern interfaces, easily accessible using a standard internet browser.

The business monitoring tool offers an easy-to-use intuitive content search for EDI messages based on required information of the business processes. JOUBINI ensures transparency. It refrains from typical EDI-specific terms. Instead, it provides document-specific search options, such as purchase order, article, or invoice number. Once cryptic EDI messages can now be retrieved and downloaded as PDFs – no special IT knowledge required.

Tailored to your needs – choose what works for you

JOUBINI comes with a canonical mapping concept with a library of over 15,000 standard mappings for connecting your business partners from all sectors. Standard mappings are available for all common business processes, such as purchase orders, bills of delivery, invoices, and credit memos. Additionally, an optional mapping toolkit gives you the option for in-house development and customization of mappings done by your own development team.

Our goal: Offering you a state-of-the-art integration platform in the full-service

- JOUBINI covers every interface requirement and integrates all backend systems
- With our proprietary, certified data center located in Germany, we offer maximum security for your data
- A multi-lingual international service team provides support 24/7
- Thanks to the global presence and long-term expertise of NTT DATA, we can consult customers across the globe
- The modular structure and scalable price model ("pay-per-use" principle) provide maximum transparency of costs

Monitoring Made Easy

The technical monitoring enables an overview of all processes, successful or faulty, as well as a description of all steps within the business process. Within the protocol monitoring, the IT department can oversee all technical activities of the business processes and can, in case of error, view log information.

25+

years in the field of
business integration

NTT DATA Business Solutions offered the right solution for our complex requirements – ” JOUBINI* as an integration platform between SAP and OPC-UA-supported production control enables stable operation of the systems.
