Cyber Essentials +	One derisking vulnerability scan, and one external vulnerability scan for CE + submission included Further scans from £140	Starting from £1629

Consultancy Services	First 2 hours free £150 / hour	-
Policy Monitor access for the duration of the assessment	Included in package	Included in package

Policy Monitor Integrations:

Provides users with extensions of the base application served by external organisations.

Integration	Cost (£)	Notes
Qualys (Cloud Agent)	Starting from £5 / month	There is a flat rate applied, starting from £5 per month, to use our Qualys integration. There is then an additional variable rate, starting from £0.15 per Cloud Agent per month. Prices may vary dependent on usage. This service does not require a virtual scanner as the agent is downloaded onto your device. This does not cover scanning of devices such as printers or routers which cannot download the agent. The benefit of this in addition to the scanner means that all devices are reporting vulnerabilities even if they are working from home and not on the scanned network.
Qualys Virtual Scanner deployed into your network (Vulnerability Scanning)	£850 / year	Virtual scanner. You require this if you cannot expose your network to us via a VPN and therefore must deploy the scanner on your network. Typically, it is installed onto a virtualisation server such as VMWare or MS Hyper-V.
Qualys (Vulnerability Scanning)	£50/month	Unlimited maps and vulnerability scans on a virtual scanner applied to your network to defined IP ranges to a defined schedule.

Qualys Vulnerability set up and analysis consultancy	£150/hr	Services related to vulnerability scanning using a virtual scanner: - Deploy virtual scanner. - Run initial mapping. - Configure IP ranges for scans. - On demand running of scans. - Vulnerability assessments. Note: 1. Devices configured by downloading cloud agent and automatically identified and scanned. No additional consultancy required. 2. Devices identify the virtual scanner using mapping are displayed in Policy Monitor. Vulnerabilities identified by Scans are displayed in Policy Monitor. Customers can react to identified vulnerabilities. Adjustments of virtual scans will require configuration by us. It is likely that new devices will be predominantly end user devices, where the cloud agent can be downloaded by the user or associated administrator.
Infrascale Backup Management	£50 / TB / month	Backups via a Cloud Agent installed on end user devices, such as a laptop. Price based on amount of total storage requested, not on storage utilised.

All prices are excluding sales taxes and Policy Monitor charges are to be settled by DD payments.
