

NIS2 support

Protect critical services. Avoid penalties. Build long-term resilience.

Network and Information Security Directive 2 (NIS2) is the EU's latest directive aimed at strengthening cyber security and resilience across key sectors. It is designed to protect critical services from today's rapidly evolving cyber threat landscape.

NIS2 framework introduces significant improvements in risk management and incident response obligations across five key areas:

1 Cyber security risk management:

Entities must implement robust policies and procedures across key areas such as business continuity and information security.

2 Notification obligations:

Entities must notify a designated national competent authority of cyber security incidents within the set timeframes.

3 Cyber security information sharing:

Entities must share cyber threat intelligence via trusted networks to strengthen collective cyber defences.

4 National cyber crisis management frameworks:

EU Member States need cyber crisis management frameworks to ensure a coordinated and effective response to nationally significant cyber incidents

5 National cyber security strategy:

Each Member State must develop a comprehensive national strategy

Our services

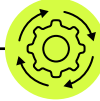

We deliver end-to-end cyber security solutions tailored to NIS2 compliance, combining strategic consultancy, incident response, and information security with robust training and capacity building programmes.

Our NIS2 support services include:

Cyber security consultancy

Business continuity planning

Incident preparedness & response

Information security management

Supply chain security

National Incident Management Framework implementation

Training and capacity building programmes

2 / 2

Why choose PGI?

We provide comprehensive, strategic services across all key areas of the NIS2 framework, making us a trusted partner to support compliance and build long-term resilience.

- Global trusted partner
- Collaborative approach
- Leaders in incident response
