Your expert partner in managing digital threats and building resilience.

In our 24/7 digital world, where the pace of technological advancements is accelerating, nations and organisations are striking a balance between embracing innovation and managing risks. The evolving nature of online threats, including cyberattacks, data breaches, and other digital harms, creates a constant challenge to stay ahead of

malicious actors while maintaining security and regulatory compliance.

At PGI we understand that protecting your organisation isn't just an IT concern – it's a business strategy. Our intelligence and cybersecurity advisory services help our clients proactively mitigate emerging digital threats, ensure regulatory compliance and build

resilient internal teams to minimise operational disruption and safeguard reputations.

We prioritise human-led, tech-supported insights and expertise, and as a trusted partner in 90+ countries, we help national governments, global NGOs, and multinational corporations navigate the complexities of the digital world with confidence.

We do this across three key areas of expertise:

1

Emerging threats

We identify, investigate, and mitigate evolving digital threats—from AI-driven adversarial activity to cyber intrusion and espionage. Our human-led, tech-supported expertise uncovers nuances that automated tools miss, enabling proactive risk reduction.

2

Compliance and regulatory risk

We help organisations navigate complex digital regulations, mitigate compliance risks, and achieve certification through integrated governance, risk, and regulatory consulting—minimising disruption and ensuring regulatory resilience across sectors.

3

Digital resilience

We deliver intelligence-led resilience, proactive cybersecurity, and long-term capability building—to help organisations protect people, assets and operations from adversarial threats, minimise disruption, and maintain robust digital defences.

3 / 8

Online Platforms

We combine tailored OSINT, social media threat intelligence and global regulatory insights to help clients proactively disrupt digital threats, protect their reputation and ensure compliance, so they can maintain user trust and safety across their Platform.

How we help

Threat intelligence

We take a networked approach to threat intelligence and are well-known for the breadth and quality of our research—ranging from adversarial use of AI to illegal marketplaces and extremism.

Regulatory support

With strong compliance and geopolitical knowledge, we guide platforms through complex digital regulations, preventing fines and disputes.

Building resilience

Our comprehensive intelligence reporting ensures proactive resilience against adversarial campaigns; safeguarding platforms and users from illegal content and inauthentic experiences.

With our comprehensive support, platforms can proactively protect themselves from digital threats, ensuring the safety of users and the integrity of their operations.

PGI IN ACTION:

2024 was labelled as the ‘Year of Elections’ with 90 major elections, involving more people voting in a year than ever recorded in history. Our Digital Investigations team monitored 30+ election information environments, often simultaneously, to identify, track, and report covert influence operations and disinformation campaigns that sought to target the integrity of the elections and erode information resilience.

Our work led to multiple takedowns of inauthentic assets and disruption of election-focused online campaigns and activities that violated platform policies.

International programmes

We support international government organisations to identify emerging digital threats, create tailored compliance frameworks, and develop their workforce to deliver long-term cybersecurity resilience, support economic stability, and instil public confidence.

How we help

Threat intelligence

Many of the UK Government's allies rely upon our deep investigative expertise to expose evolving digital threats and recommend remediation activities to reduce their risk exposure.

Capacity building

We help nations navigate, adopt and integrate compliance frameworks that protect their interests while strengthening their position in global markets.

Workforce development

We help nations to not only develop robust digital defences, but cultivate skilled workforces capable of independently managing and adapting to future risks.

By partnering with us, nations gain the expertise to navigate evolving threats, comply with international frameworks, and build sustainable digital resilience that strengthens their cybersecurity posture and supports long-term strategic objectives.

PGI IN ACTION:

A national government tasked us with designing its Cyber Security Centre, complete with Cyber Threat Intelligence, Security Operations, Incident Response and Policy functions.

After conducting a risk assessment, we developed a bespoke, highly tuned operating model that would manage threats and deliver the national strategy. The model ensured that the Centre, critical infrastructure and other agencies could work together effectively. We also designed a Training Centre and programme to develop the skills of internal staff on an ongoing basis.

Corporate organisations

We empower organisations of all sizes and sectors to navigate complex regulatory requirements and cyber risks with confidence. By combining cybersecurity and compliance expertise with capacity-building frameworks, we ensure clients achieve regulatory alignment and lasting resilience to emerging cyber threats.

How we help

Identify vulnerabilities

We identify, investigate and mitigate evolving digital threats for clients before they escalate. Our team often identify nuances that off-the-shelf frameworks and products miss, enabling our clients to implement proactive security measures.

Simplify compliance

We guide our clients through complex standards like ISO 27001 and PCI DSS delivering step-by-step compliance support while reducing risk exposure and simplifying the accreditation process.

Resilience testing

We help our clients minimise disruption in the face of an incident. Our continuous support helps build and test resilience, ensuring strong defence and response.

By working with us, clients can proactively manage digital threats, streamline compliance processes, and respond swiftly to incidents, building a resilient cybersecurity posture that protects against evolving risks and strengthens long-term security maturity.

PGI IN ACTION:

When our client, an intelligence software company, had to make their information security processes comply with ISO 27001, we needed to find a solution proportionate to the needs of this SME and maintainable by their small team. First, we created a Forum of key stakeholders to discuss ISMS options and make decisions. We then tailored and implemented a bespoke Information Security Management System (ISMS), and mentored the client's team to run it successfully.

Our client achieved certification to ISO 27001 at the first attempt, reporting that the auditor “was impressed with many aspects of our ISMS” and “went well above and beyond what we would have expected from consultants”.

UK Government and Public Sector

We enable government and public sector organisations to navigate complex regulations, mitigate emerging digital threats, and build robust security capabilities through an integrated, relationship-focused approach that empowers them to safeguard national infrastructure and uphold public trust.

How we help

Threat intelligence

Our human-led, tech-supported expertise highlights nuances that automated tools miss, enabling our clients to put in place proactive measures that adapt to malicious threat actor tactics.

Governance, Risk and Compliance support

Our integrated governance, risk, and regulatory consulting simplifies the accreditation process and helps public organisations navigate evolving regulations, proactively prepare for audits, and reduce regulatory risk exposure.

Improve security posture

We empower public sector organisations to continuously develop their cybersecurity posture and defend themselves against threats to national infrastructure.

By partnering with us, public sector organisations can stay ahead of evolving threats, ensure compliance with regulatory requirements, and develop a resilient, self-sustaining cybersecurity strategy that protects critical infrastructure and enables future growth.

PGI IN ACTION:

Since 2018, we have partnered with Forestry England to provide comprehensive cyber security services, including Penetration Testing, Information Assurance Consultancy, and staff training. Our tailored training courses and annual penetration testing have ensured the organisation's data remains secure. Over the years, we have become an integral part of Forestry England's team, continuously supporting them in mitigating cyber threats and enhancing their cyber security measures.

Our strong reputation with the UK government, multi-sectoral experience and international reach means we are best placed to ensure your digital security. Bespoke and independently accredited courses as well as our strong partnership ethos means we support our clients every step of the way. Find out more at www.pgintl.com
