

IT Health Checks: Your assurance against cyber risk

An IT Health Check (ITHC) isn't just a compliance tick-box. It's also a strategic safeguard for your organisation's resilience and reputation. With an ITHC, you'll be:

Protecting your sensitive data Public sector organisations handle vast amounts of sensitive information. An ITHC identifies weaknesses across your IT infrastructure, ensuring data remains secure.	Ensuring business continuity System failures can halt critical operations. Regular health checks help you stay prepared, minimising disruption and maintaining service delivery.
Strengthening your security posture Cyber threats evolve daily. ITHCs provide structured, annual assessments that keep your defences ahead of attackers.	Proactively managing your risk Gain visibility of vulnerabilities before they become incidents. ITHCs deliver actionable insights to mitigate risk effectively.

Why choose PGI?

PGI's experts provide:

- **Prioritised vulnerability management:** We don't just list issues—we rank them by real-world risk to your operations.
- **Actionable remediation advice:** Our reports include clear, practical steps for short-term fixes and long-term resilience.
- **Compliance assurance:** We ensure alignment with PSN, Cyber Essentials, and ISO 27001 requirements.

You get:

- Scoping support to identify systems and environments for testing.
- External and internal testing.
- Credentialed scanning to ensure deep analysis using authenticated access.
- Detailed reporting, including CVSS severity ratings, remediation guidance, and executive summaries for stakeholders.

The difference between ITHC and Penetration Testing?

An **ITHC** is compliance-driven, structured, and mandatory for public sector organisations while a **Penetration Test** is flexible, optional, and tailored for broader security needs.
