

G-Cloud 15 Service Definition

Helping you secure and control Oracle Financials/HR systems

Systems Risk Services is a specialist consultancy focused on helping government organisations secure and control their use of Oracle ERP and HCM systems

- Our services include remote Health check service propositions, as well as popular implementation support which can either be fixed fee/deliverable or more bespoke support delivered on site or remotely. We also provide a Managed Service for Oracle Fusion Security and Controls.
- Our services are available on their own or in combination. Remote health check service propositions can be purchased to provide insight into current controls and if required, supplemented with bespoke security and controls implementation support. See each service offering and rate card for further information.

G-Cloud 15 Service Definition

Oracle Fusion Cloud ERP Security and Controls Healthcheck Assessment

Our Oracle Fusion Cloud ERP Security & Controls Healthcheck reviews your current Fusion Cloud ERP security, access, auditing and business process controls to highlight areas of strength and areas requiring improvement.

Application Security

Shows key security controls such as password controls, systems administrators and inactive users

Access Controls and Segregation of Duties

Shows access privileges that both users and Roles have been assigned and where these conflict with best practice

Business Process Controls

Shows key process controls such as journal approval settings and chart of accounts configuration and where these are inconsistent or not good practice

Key security and controls challenges to address in Oracle Fusion Cloud ERP:

- ↓ Out of the box Oracle Fusion Cloud ERP has inefficient and uncontrolled processes and a number of security weaknesses exist
- ↓ With 5,000+ Roles by default and 8,000+ privileges, understanding which of these are high risk, which should be segregated and which users have these conflicting privileges is a major challenge
- ↓ Limited reporting exists to help you identify issues and exceptions
- ↓ Implementers typically focused on getting Oracle working, not control
This is even more so with Oracle Cloud ERP/Fusion Financials implementations where implementers regularly use a templated design

Key benefits of our approach

- ↑ Reduces likelihood of data loss, fraud and error
- ↑ Security and controls weaknesses are highlighted, their business risk explained and realistic recommendations are included
- ↑ Cloud ERP specific tests inc. FBDI One Time Payments and Supplier Banks
- ↑ Identify opportunities to better use what you've already paid for
- ↑ Developed and delivered by UK-based Oracle ERP Risk experts who have acted as both Oracle risk implementers and auditors
- ↑ Service requires no additional tools or licenses
- ↑ Data does not leave the UK and is only accessed by people in the UK

Pricing

Ranges from £12,000-22,000 + VAT, dependent on the number of business processes being reviewed and the number of users on the system. Volume discounts are available for organisations performing quarterly or monthly reviews. See separate **Pricing document** for further information.
