

Cloud Capability Delivery and Support Service

Service Overview

Inzpire's Cloud Capability Delivery and Support Service enables organisations to understand their user needs and requirements and develop an effective and efficient plan to achieve a successful transition to cloud environments. Our services embrace all aspects of cloud-based change programs, ensuring they meet user needs. Our experience working alongside various organisations enables us to support you in better understanding your vision and strategy, helping us develop and articulate your requirements for IT change.

Inzpire's team ensures that all risks, assumptions, issues, dependencies, and opportunities are captured and managed. At the end of the development phase, we create a clear, cohesive, and achievable plan for your IT change program and then support you through delivery to a successful conclusion and onwards with through life support.

Inzpire has a strong pedigree in building and leading successful teams, blending the proven abilities of our professionals with the local knowledge and skills of our clients. We seek to relieve the pressure on your organization by taking full responsibility for the program, from inception through all stages of development and delivery to completion.

Service Description

All of our teams are composed of the highest quality subject matter experts, all trained and experienced project and program managers who hold the highest government security clearances.

Inzpire's processes to implement Cloud Capability Design and Support include:

- Capture of requirements, set against company vision and strategy
- Capture of assumptions, issues, dependencies, and opportunities, then identification of project/program risk and management of all these factors to ensure successful implementation
- Development of a high-level project/program plan with clear aims, objectives, and outcomes
- Delivery of a top-down incremental plan, including milestone reporting to enable board-level decision making and risk and issue triggers to provide early warning of positive or negative events
- Leadership of the project/program, working in sync with your team to deliver an effective implementation plan

Our services are driven by business requirements and client engagement. These areas create a shared vision between business and technology functions. Our SMEs promote innovation within a team, drive changes, and elevate flexibility leading to improved business results, business process efficiency, and optimized technology spend.
