

Cyber Security and Resilience Training

Service Overview

Inzpire has a 20-year pedigree of delivering high-quality and affordable training to the UK military. This includes combining our excellence in training delivery with our deep understanding of offensive cyber capabilities and defensive cyber operations. This allows Inzpire to deliver both bespoke and off-the-shelf Cyber Security and Resilience training which allows clients to integrate our expertise in improving organisational resilience against cyber-attacks into their governance framework, policies, plans and operational practices.

All of our training takes a socio-technical approach to security and resilience covering people, policy, process and technology. Whether you choose our bespoke training packages to provide maximum relevance and engagement or our off-the-shelf training, our training is cost-effective and will reduce risk of successful cyber-attack and mitigate the impact on business of a successful cyber-attack.

Using a team of highly-experienced training design and delivery personnel alongside our cyber subject matter experts Inzpire can deliver relevant, challenging and engaging training to all levels of an organisation. We have an established background in the provision of cyber training for a variety of government departments ranging from Defence or Interior Ministries to Security Services, both in the UK and overseas.

Service Description

All of our teams are made up of the highest quality subject matter experts, drawing together experience from team members from ex-military backgrounds, law enforcement and from cutting edge technology companies. Our trained and experienced team hold the highest government security clearances.

Depending on the type of training required and the maturity of the training requirements Inzpire can provide a full end-to-end training service or selected modules from our extensive training academy catalogue.

- Inzpire's Training Needs Analysis team are experts in eliciting your training needs and developing an agreed set of training requirements which will appropriately challenge the participants.
- All of our training includes extensive use of real world examples and demonstrations alongside the use of exercises to maximise audience engagement.
- Our bespoke and off-the-shelf training courses include: User level awareness training; Understanding Cyber security for management personnel; Incorporation of cyber resilience into Business Continuity Plans; Development of Immediate Actions procedures; Incident response training and Cyber Resilience Programme design training.
- All of our training packages can be tailored to different levels within your organisation, ensuring that the audience receive the most appropriate training based on their position and responsibilities within your organisation.
