OpenText Core Content Express for G-Cloud 15

Introducing OpenText Core Content

The smarter, faster path to content-driven productivity

Many organisations struggle with fragmented content systems and rising compliance complexity. At the same time, they must meet increasing productivity demands and deliver seamless digital experiences. To transform, organisations look to integration and GenAI to change how they create, manage, and use content. In fact, 81 percent of organisations surveyed have already integrated GenAI into their content management strategies, with more than half using it to drive automation and optimise workflows.[1]

Benefits

- Secure your content with robust information governance
- Drive productivity with a GenAI assistant
- Automate processes with integrated workflows
- Get up and running fast with SaaS.

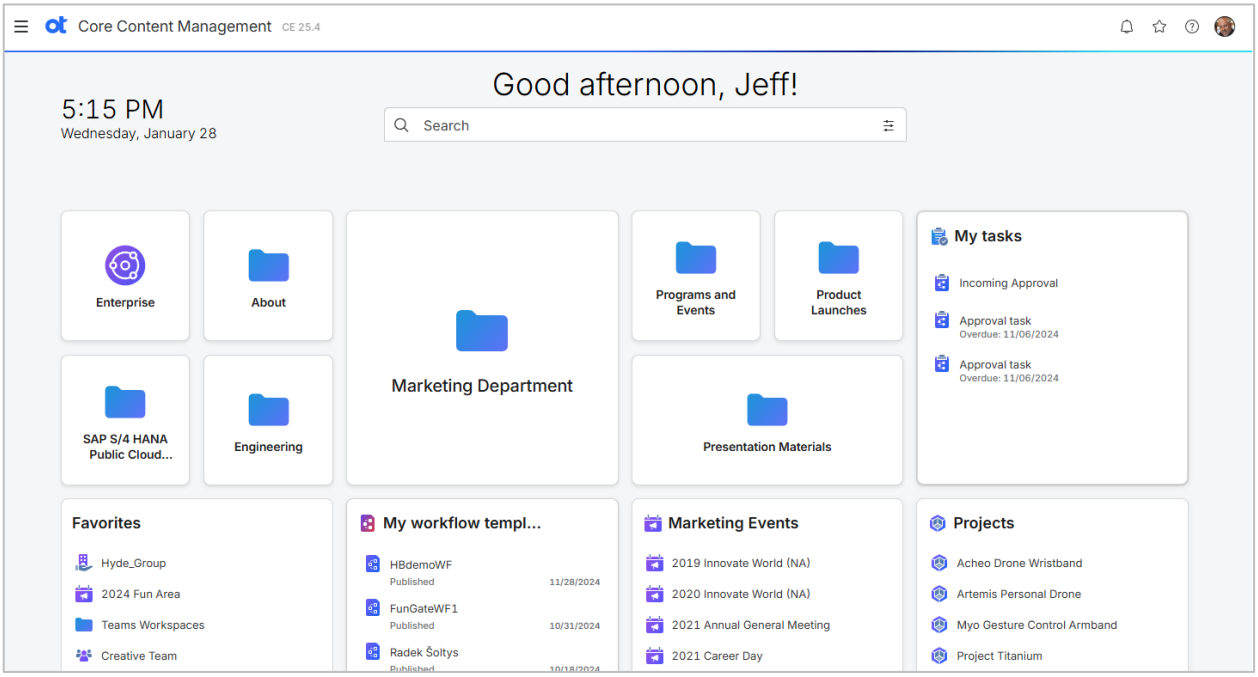

To succeed, organisations need a cloud-native solution that is smart, unified, and easy to control and use.

OpenText™ Core Content Management is a cloud content management solution that supports both business productivity and operational simplicity. It helps organisations address business process inefficiencies, collaboration challenges, and rising IT complexity by centralising content in a secure, cloud native platform. Plus, an integrated intelligent content assistant helps maximise user productivity by automating tasks like summarisation, analysis, and translation through conversational search.

Secure your content with robust information governance

Worried about data breaches, regulatory fines, and the inability to track who accessed what and when? Ensure your content is protected, compliant, and auditable. Intelligent cloud content management helps you take control by enforcing governance policies automatically classifying documents, applying retention rules, and tracking every action. You stay compliant with regulations like ISO and SOC2 while maintaining full visibility and control over your information.

Core Content home page

Automate processes with integrated workflows

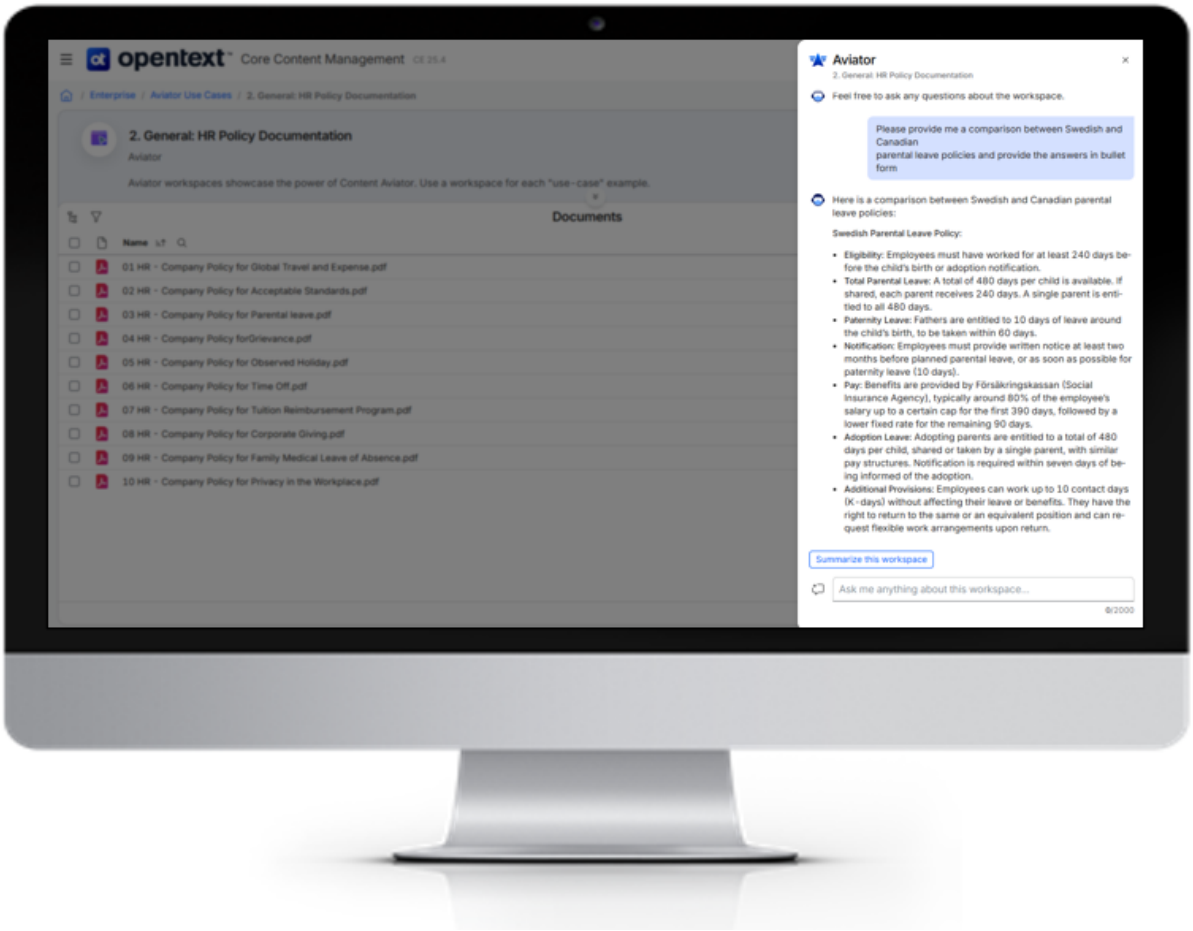

Manual, disconnected content processes slow teams down, introduce errors, and delay decisions. OpenText's intelligent cloud content management platform provides a unified foundation to streamline both content and process driven work with built-in no-code and advanced workflow automation. Business users can configure routine workflows, such as approvals or routing, using an intuitive drag-and-drop designer with real-time editing and smart templates. Developers can build more advanced workflows using conditional logic, delayed actions, third-party integrations (e.g., Slack, Microsoft Teams), and custom scripting. These tools can be combined to create hybrid workflows that scale with evolving business needs.

Through a robust suite of native integrations with SAP, Salesforce, Microsoft and Google Workspace, teams are empowered to orchestrate end-to-end processes across business applications, providing seamless access to tasks, cases, and content through a unified workspace.

Together with cloud capture, this extended automation enables intelligent document processing, where metadata or events automatically trigger workflows, resulting in improved operational efficiency, reduced manual effort, and increased accuracy.

Drive productivity with an intelligent content assistant

Content Aviator is an AI powered intelligent assistant in OpenText Core Content Management, bringing together key capabilities such as its Conversational assistant, which accelerates work by using natural language to deliver relevant answers from lengthy documents and business workspaces and draft emails and visualisations. Through Data visualisation, it compares information across files to identify discrepancies, support decisions, and build graphs and tables from unstructured data. Its Multilingual translation feature supports global collaboration by responding in users' preferred languages and understanding queries across multiple languages. With a strong emphasis on Information governance, it honours ongoing security, policy, and retention requirements, as well as ethical AI practices, in every interaction.

Get up and running fast with SaaS

Modernising content systems quickly requires a solution that delivers value fast. A cloud content management platform offers rapid deployment, low maintenance, and minimal IT involvement. With ready-to-use configurations and automatic updates, it's built for speed and simplicity.

This intelligent SaaS solution can help accelerate digital transformation without disrupting day-to-day operations.

OpenText Core Content Management empowers organisations to modernise how they manage, govern, and collaborate on content—securely and efficiently. By combining intelligent automation, robust compliance, and seamless integration with leading business platforms, OpenText Core Content Management helps teams reduce complexity, accelerate workflows, and focus on strategic priorities. What sets OpenText apart is its unified, cloud-native platform that delivers enterprise-grade capabilities with the simplicity of SaaS. With built-in AI assistance, configurable workflows, and flexible subscription plans, this cloud content management platform adapts to your needs, whether you're just beginning your digital transformation or scaling enterprise-wide

OpenText Core Content Premium Plan

Available as a premium uplift, a complete intelligent SaaS content management, plus advanced capabilities such as digital signatures and cloud-based document capture, enabling end-to-end content lifecycle management in the cloud.

OpenText Core Capture

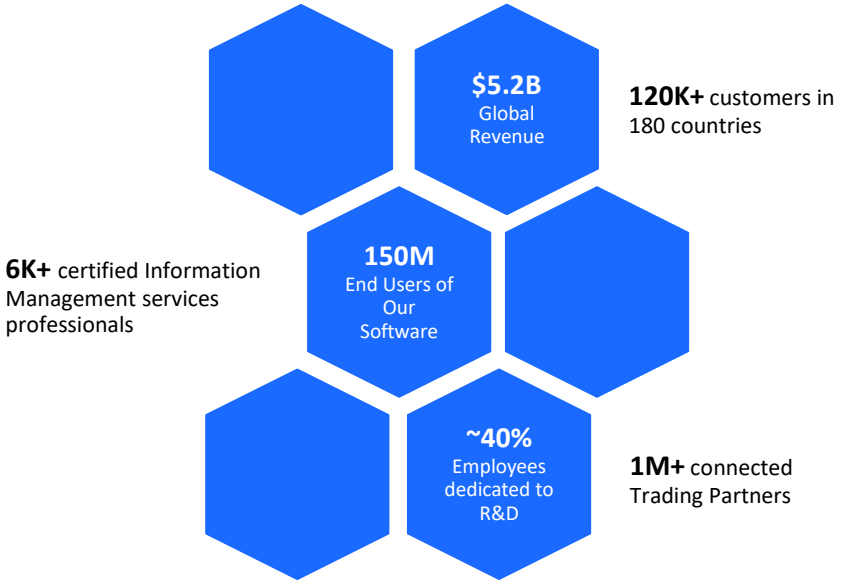

Available as an optional add-on to Core Content, Core Capture is a SaaS information capture solution that uses continuous machine learning and large language models (LLMs) to automate content classification and data extraction. It combines standard capture features, such as optical character recognition (OCR), with powerful AI technology to enable intelligent document processing solutions and securely route information to the right users and systems

OpenText Core Signature add-on for electronic signatures

OpenText Core Signature is a professional and enterprise-grade electronic signature solution that allows employees and third parties to sign quotes, contracts and other documents in a fast, compliant and hassle. Available as an optional add-on to Core Content, Core Signature offers electronic signing capabilities with enterprise level security and compliance, including server certification, data encryption and audit capabilities.

OpenText Core Signature Service

Core Signature Service enables developers to easily build and integrate document preparation and secure, rapid electronic signing to existing solutions or other offerings. Core Signature Service will provide developer-centric APIs for more purpose-built use-cases, including document routing, tagging and templating.

We are OpenText

OpenText, The Information Company™, powers and protects information to elevate every person and every organization to gain the information advantage. A leader in Information Management, OpenText offers a comprehensive portfolio across content, business network, digital experience, security, application modernization, operations management, and developer APIs.
