

Mobile Connect for Microsoft Teams

Turn any mobile device into a full-fledged Microsoft Teams Phone endpoint with a native calling experience and optimal voice quality, without the need for apps.

What is it?

Pure IP's Mobile Connect for Microsoft Teams, powered by Tango Networks, extends the calling capabilities of Microsoft Teams directly to any mobile device, without the need for additional apps. It's an ideal fit for businesses that employ a Bring Your Own Device (BYOD) model, catering to the needs of mobile, remote, and frontline workers. This solution delivers a secure, cost-effective way to integrate non desk-based personnel into your organization's communication network.

How it works

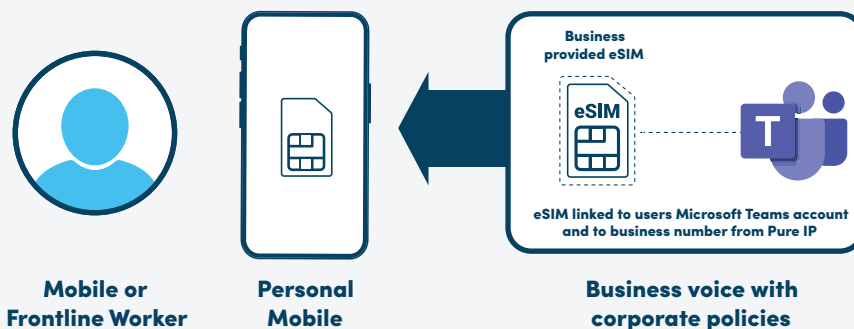

Pure IP's Mobile Connect seamlessly extends Microsoft Teams Phone functionality to nearly any mobile device, leveraging Tango Networks' eSIM technology.

Mobile Connect links your Microsoft Teams Operator Connect or Direct Routing number to an eSIM via Teams SIP Gateway. The eSIM functions as an additional SIM on the user's phone, enabling calls to route through their Microsoft Teams Phone number without the need for the Teams app.

Calls are made and received using your phone's native dialer, routed through Microsoft Teams for a consistent presence, voicemail, and compliance recording if enabled. It is the perfect solution for users wishing to utilize their Teams number on a personal/BYOD device, completely hassle-free.

Key features

- **Make and receive calls** directly from your mobile phone using a Teams Phone number
- **Seamlessly extend** business communications to frontline and knowledge workers
- Apply Teams **call routing policies** to mobile business calls
- Ability to **record Teams Phone** communications for compliance or quality monitoring
- Keep your business and personal communication channels **separate and secure**
- Safely enables **BYOD workers** to utilize their personal devices for business communication

Prerequisites

In order to use Pure IP's Mobile Connect service:

A Teams Phone License, either included in an E5 subscription or as an add-on

A Teams Direct Routing or Operator Connect setup with an assigned DID/DDI from Pure IP

A mobile device that supports eSIM technology

"We're excited to expand our partnership with Pure IP. As a Certified Mobile Calling Provider for Webex Go, Pure IP will provide Webex customers with more choice and flexibility for mobile compliant calling."

- Amey Parandekar, VP of Product Management at Cisco

Why Choose Mobile Connect?

- **Cost efficiency:** Reduce business costs by eliminating company-issued mobile devices.
- **Unified Voice Service:** Provide a consistent user and customer experience with single-number calling.
- **Single Provider:** An extension of Pure IP's fully managed, cloud-based global voice services, for simplified management, billing, and support.
- **No app required:** Enjoy excellent call quality using the device's native dialing system. This ensures a familiar calling experience, bypassing potential call quality issues that can occur with data-reliant apps.
- **Privacy and Zero Data Use:** Using a secondary business SIM for all business-related calls, ensures that personal data is kept safe and that business communication does not eat into the user's personal data allowance.
- **Easy Setup:** With eSIM technology and quick QR provisioning, installation takes just minutes and eliminates the need for in-person assistance, reducing costs and expediting the deployment process.
