

FACT SHEET

Next-generation Firewall Management

Secure your first line of defence

With cyber crime being such a major concern, firewalls are an essential first line of defence. However, as firewalls have evolved to deliver more and more, managing them has become increasingly difficult for IT departments short on time, resources, and often cyber expertise. In fact, managing firewalls on a continuous basis and keeping pace with new technologies is complex and time-consuming, with regular changes, updates, patching, and constant monitoring required to ensure service availability.

Overview

Wavenet's Managed Firewalls service will ensure all the features and capabilities are implemented within your firewalls at the optimum point in your network and managed efficiently and effectively. This delivers optimum service levels, ensures service availability, as well as resource and cost efficiencies. Our partnerships with leading security vendors give you access to the latest next-generation firewall (NGFW) technology in conjunction with a team of security specialists who are able to design, deploy, and manage on a 24/7 proactive basis.

With three service options, you can choose the best fit next-generation firewall management support level for your organisation's specific needs.

Advised (Essential)

Designed for customers who want to manage their own environment yet have access to skilled technical resources for ad-hoc assistance where required.

Monitored (Enterprise)

Designed for customers wishing to co-manage their environment with Wavenet, adding monitoring and event management.

Managed (Enterprise Plus)

Designed for customers requiring a fully managed service, safe in the knowledge that their firewalls are being monitored and managed by Wavenet's experienced engineers. Includes incident and problem handling, plus change and patch implementation.

What does Next-Generation Firewall Management deliver?

- Reduction of risk
- Access to advanced technologies
- Protection of your brand
- Enables you to focus on your business
- Access to vital expertise

Why Wavenet for Next-Generation Firewall Management?

Wavenet has many years of experience providing, installing, supporting, and managing network security technology. We are a Cisco Gold Partner, Fortinet Expert Partner and Palo Alto Innovator, and our engineers hold accreditations such as Cisco Certified Internetwork Expert (CCIE), Fortinet Network Security Engineer (NSE) and Palo Alto Networks Certified Network Security Engineer (PCNSE).

Wavenet's Security Operations Centre (SOC) is UK-based and available on a 24/7/365 basis with many of our engineers holding Certified Ethical Hacker (CEH) and Certified Information Systems Security Professional (CISSP) certifications.

Wavenet monitors and manages more than 700 firewalls for customers across the UK, from small branches to powerful data centre firewalls, protecting environments across many industries.

Why Wavenet?

We are the ideal provider for you, if you have:

- Limited internal resources to deal with managing your firewalls on a continuous basis and keeping pace with new technologies
- Need of a reliable partner to provide reassurance that help is available 24/7 should a cyber attack put your business at risk

Have you thought about...?

Network Management

We provide a flexible approach for the management of campus, branch and datacentre networking services, whether it's a completely new environment or adoption of an existing network.

Hybrid Cloud Management

Enjoy a single cloud solution that can encompass everything from compute, to connectivity, to voice, to workplace services, to recovery.
