BOOMI SERVICE DEFINITION

Boomi is a market-leading, low-code, Enterprise Integration Platform (iPaaS) that integrates applications, APIs, data, and AI agents, transforming businesses with AI-driven automation. The Boomi Integration Platform enables customers to connect data, applications, processes, and devices across any channel, device or platform. The service can be configured to your needs based on the following components.

- **Integration:** The core service for building, deploying, and managing integrations using a drag-and-drop interface.
- **API Management:** A service to design, secure, and scale APIs through their entire lifecycle.
- **Master Data Hub:** A service for synchronizing and governing master data across systems.
- **Flow:** A low-code development service for creating automated workflows and customer journeys.
- **Event Streams:** A message queuing and streaming service for real-time responsiveness.
