Claria

WSO2 BIJIRA PRICING

Flexible Pricing Options

WSO2 Bijira is an AI-native, SaaS-based API management platform designed to help organizations secure, govern, and manage both traditional and AI/LLM APIs. Its pricing structure is designed to be usage-based, focusing on AI token consumption, API request volumes, and the number of integrations. Claria UK Ltd can provide a tailored quote based on your specific requirements.

Pricing Tiers

Bijira generally offers tiered plans that scale with usage:

- Starter Tier: Designed for initial, smaller-scale projects.
- Pay-As-You-Go: Geared towards growth, charging for actual usage.
- Enterprise: Custom pricing for large-scale, high-volume, or specialized requirements, including features like private data planes and multi-cloud deployment.

Key Cost Components

- API/Transaction Fees: Based on API call volume
- AI Token-Based Rate Limiting: Bijira allows setting quotas based on LLM token counts to control costs associated with AI services.
- Pre-production Environments: Initial environments are often included, with additional ones charged at a percentage of the subscription fee.

- Add-ons: Costs for additional capacity, such as API Manager Scaling or Enterprise support, are extra.
- VPN/VPC Peering: Available as an add-on
