Claria

WSO2 CHOREO PRICING

WSO2 Choreo follows a **usage-based pricing model** primarily driven by the number of active components and the cloud infrastructure consumed. It is designed to scale from individual developers to global enterprises with three main tiers. Final, tailored pricing is generally determined through consultation with Claria to match specific workload requirements.

1. Developer (Free) Tier

Ideal for exploration and small projects:

- **Components:** Up to **5 components free**.
- **Resources:** Includes **monthly infrastructure credits** to cover CPU, RAM, and network usage.
- **Capabilities:** Limited to 1 project, 2 developers, and basic community support.
- **Scaling:** Components automatically scale down to zero when not in use to save credits.

2. Team (Pay-As-You-Go) Tier

Designed for collaborative teams building cloud-native apps:

- **Platform Fee: charged per component per month.**
- **Infrastructure:** Infrastructure costs (CPU, RAM, storage) are passed through at cost, though new sign-ups with a business may be entitled to credits for an introductory period

- **Usage Limits:** Up to 10 projects and 30 components.

3. Enterprise Tier

A customized model for large-scale deployments:

- **Pricing:** Custom quotes based on annual commitments.
- **Volume Discounts:** Significant discounts are available as the number of components increases (e.g., dropping from $150 to as low as **$75/component** for 200+ units).
- **Private Data Planes:** Includes the ability to deploy the Choreo Data Plane into your own AWS, Azure, or GCP accounts for compliance and data residency.

Key Pricing Dimensions

- **Component Definition:** Choreo bills per "component" (e.g., a microservice, API proxy, or scheduled job) rather than charging for individual integration features or connectors.
- **AI-Powered Optimization:** The platform includes a **Cost Optimizer** that uses AI to detect underutilized resources and recommends "right-sizing" to prevent over-provisioning.
- **Platform Services:** Add-on services are billed hourly based on the specific service plan selected.
