About Olive Jar

Who We Are

Olive Jar Services include a range of activities that ensure successful implementation of your cloud service. We design and deliver cloud based services from Discovery to Live. We provide full agile multi-disciplinary teams who are ready to commence work on your service immediately.

Our teams are agile skilled resources who have specialist knowledge in their fields of expertise. This includes areas such as User Research, Design, Test, Implementation, Development, QA, Data Migration, Architecture, Security, Scalability and Maintainability of Cloud services.

We work with your internal teams, building the service to achieve the goals set. We can coach internal teams and mentor your team as needed, to help them upskill rapidly.

Business Architecture

Olive Jar Digital offers full Business Architecture for customers, which focuses on Digital Transformation and supporting the transition to cloud-based services.

Through a wide range of techniques Olive Jar's consultants analyse operation of existing business functions from multi-faceted perspectives, including organisational capabilities, structure and value, analysing these within the wider context of business strategies, policies, long term goals, stakeholders.

We focus on processes and technology, working closely with our clients to craft business solutions and organisational changes to deliver business outcomes, supporting the transition to cloud based services.

It's important that the product/services offered will deliver value. Our experienced consultants will provide this detailed analysis, demonstrating progress to key stakeholders and delivery team members, meaning there is a shared vision and understanding as the project progresses through iterations. Our team offer support throughout the delivery lifecycle.
