

SERVICE DESCRIPTION

Red Teaming Services

At CSA, we're on a mission to improve the cyber resilience of organisations around the globe. Our dedicated Red Team works with organisations of varying size and maturity to help them test and subsequently improve their resilience to cyber-attack by accurately simulating real-world adversaries.

We have a multitude of approaches available to meet any need, from a full end-to-end Red Team through to a more collaborative Purple Team or a Wargame style exercise to build the knowledge of the internal teams through collaborative working practices.

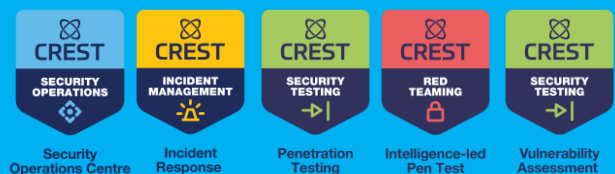

We just break into an organisations and dump a report, we actively work with internal teams to help build, improve upon and refine defensive controls and detection and response capabilities. All of our engagements include technical, and executive debrief workshops.

By partnering with CSA, you gain:

- Deep expertise: Leveraging highly certified consultants with extensive industry experience.
- Extensive capability: Our Red Team spends a lot of time on research and development to ensure our Tactics, Techniques and Procedures (TTPs) are at the cutting edge of offensive capability.
- Defensive experience and knowledge: CSA are experts at both offensive and defensive techniques, helping you to build robust, defensive cyber strategies.

BENEFITS

- **Threat-led** | We bring threat intelligence into each of our Red Team and Cyber Readiness engagements, ensuring the engagement is tailored to the exact types of threat actor your organisation is likely to face
- **Collaborative approach** | We work directly with internal teams to immediately improve defensive controls and detection and response capability through our Purple Team debriefs and workshops
- **Avoid PDFs** | Our platform lets you manage vulnerabilities interactively so you can avoid working in PDFs and Excel sheets
- **Real-time reporting** | See discovered vulnerabilities and attack paths in real-time, allowing rapid and efficient remediation
- **An extension of your team** | Our consulting team's got your back all year round for ongoing support and advice as you need it
- **Powerful platform** | Vulnerability Management, Scanning, Asset Management, Remediation Tracking
