

CSA Cyber Threat Intelligence (CTI) Assessment

The Cyber Threat Intelligence (CTI) Assessment provides organisations with a tailored understanding of the threats most relevant to their business sector, operational environment and external exposure.

CSA combines sector-specific insights with analysis of Threat Actor's behaviours, techniques and motivations to deliver a clear, contextualised view of the cyber risks facing the organisation today.

The report includes a detailed assessment of the external attack surface, publicly available information, credential leaks and available dark-web information, enabling organisations to understand how they are perceived and how they could be targeted.

Delivered by UK-based security cleared intelligence specialists, the service translates complex threat information into clear, consumable guidance for both technical and executive stakeholders.

The CTI Assessment strengthens security strategy, provides security investment prioritisation, and helps technical and leadership teams build a realistic understanding of cyber exposure. The result is a more informed organisation with a clear line of sight on threat actor capability, intent, and the specific risks that require the greatest focus.

References and case studies can be provided on request.

BENEFITS

- ✓ Clear visibility of the threats most relevant to your organization
- ✓ Clearer prioritisation needs of defensive investment and resources
- ✓ Improved executive awareness of Threat Actor behaviours and potential intent
- ✓ Identification of external exposure and publicly visible information and risks
- ✓ Actionable recommendations that directly strengthen resilience and security posture
