

SERVICE DESCRIPTION

Vulnerability Management as a Service (VMaaS)

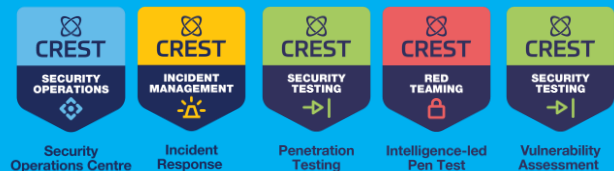

Combining expert-led security insight with the power of the Qualys Cloud Platform, CSA Cyber's VMaaS helps organisations in identifying, assessing, and addressing vulnerabilities across on-premises, cloud, and hybrid infrastructure. It is powered by the Qualys Cloud Platform – a widely adopted solution providing continuous visibility into vulnerabilities and compliance status.

By partnering with us for Vulnerability Management, you gain:

- ✓ Time & resource savings: Offload the day-to-day management of vulnerabilities to our expert team.
- ✓ Continuous visibility: Real-time monitoring with Qualys Cloud Agents across your infrastructure.
- ✓ Compliance confidence: Support for Cyber Essentials, ISO 27001, FCA, and more.
- ✓ Expert-led guidance: Ongoing advice and reporting from experienced security professionals.
- ✓ Coverage for everything: Internal scanning appliances for non-agent devices like switches and OT

BENEFITS

- **Always-on monitoring** Stay continuously informed about vulnerabilities with real-time data collection from your environment.
- **Real-time reporting** Access up-to-date insights and dashboards that help you track risk and remediation progress instantly.
- **Automated patching** Reduce manual effort and risk exposure with scheduled, prioritised patch deployment tailored to your needs.
- **Expert remediation support** Get actionable advice from experienced security professionals to address vulnerabilities effectively.
- **Scalable across environments** Whether you're managing a few servers or a global estate, VMaaS adapts seamlessly to your infrastructure.
- **Web app scanning** Tailored scans of your Web Applications and APIs help catch emerging threats before they become problems.
