

SERVICE DESCRIPTION

ISO 42001 Consultancy

ISO 42001 Consultancy helps organisations build, implement, and maintain an Artificial Intelligence Management System (AIMS) aligned to ISO/IEC 42001:2023. The service strengthens responsible AI governance, ethical operation, risk management, and regulatory alignment through gap assessments, policy development, lifecycle controls, and certification preparation enabling trustworthy and compliant AI adoption.

AI Governance Gap Assessment

Evaluates existing AI practices, documentation, and controls against ISO 42001 requirements to identify maturity gaps.

Review of Existing AI Policies

Assesses current governance frameworks to ensure alignment with ethical, technical, and legal expectations.

AI Risk & Impact Assessments

Identifies risks across data, models, processes, and deployment, ensuring mitigation strategies are tailored accordingly.

Stakeholder Interviews & Validation

Engages leadership, technical teams, and process owners to validate governance and operational readiness in context of AI usage.

AIMS Control Implementation

Supports deployment of required governance, security, and operational controls across the AI lifecycle.

Accountability Framework Design

Defines roles, responsibilities, and decision-making structures for AI oversight.

BENEFITS

Clear Ethical AI Governance & Lifecycle Processes

Ensures AI systems are designed, deployed, and operated responsibly across the full lifecycle.

Alignment with Global AI Regulations

Supports compliance with ISO 42001, emerging worldwide AI laws, and sector-specific requirements.

Increased Stakeholder Trust & Confidence

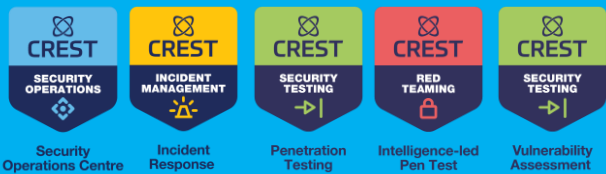

Demonstrates transparent and responsible AI use to customers, regulators, and partners.

Streamlined AI Development & Operations

Improves consistency, reduces rework, and supports efficient, well-governed AI delivery.

Reduced Bias & Model Failure Risks

Strengthens safeguards against ethical, operational, and technical failures in AI systems.
