

SERVICE DESCRIPTION

Supplier Assurance

Supplier Assurance evaluates the security maturity, contractual compliance, and operational risk of third-party suppliers. The service aligns with NIS2 and modern supply-chain assurance expectations, strengthening organisational resilience through structured due diligence, audits, evidence validation, and continuous monitoring.

Supplier Risk Assessments

Evaluates supplier security posture, controls and exposure to determine inherent and residual risk levels.

Due-Diligence Reviews

Assesses documentation, certifications, contractual commitments, and security processes to verify trustworthiness.

Third-Party Audits

Performs targeted assessments or onsite reviews to validate actual control effectiveness, not just documented claims.

Continuous Monitoring

Tracks changes in supplier risk such as incidents, certification lapses, or operational instability over time.

Certification Validation

Confirms accuracy and validity of ISO 27001, Cyber Essentials, SOC 2, and other security certifications.

Risk Tiering

Categorises suppliers by criticality, data access, and service impact to determine required assurance depth.

Governance Reporting

Provides structured insights to leadership on supplier risks, trends, and recommended interventions.

BENEFITS

Reduced Supply-Chain Risk

Early detection of weak controls reduces the risk of vulnerabilities exploiting your environment.

Better Regulatory Alignment

Aligns with NIS2, ISO 27001, procurement rules, and modern supply-chain security obligations.

Increased Assurance Confidence

Gives leadership clear, evidence-based confidence in supplier security practices.

Better Procurement Decisions

Supports risk-informed vendor selection and contract negotiation.

Enhanced Governance Maturity

Strengthens organisational oversight, reporting, and strategic planning around supply-chain security.
