AWS ServiceNow	N/A
AWS Databricks	N/A
AWS Snowflake	N/A

Commercial Disclaimers

AWS Services are entirely consumption based. As such, per app pricing does not apply.

Infrastructure Pricing

Kerv does not own or operate the underlying cloud infrastructure services. Infrastructure and hosting services are owned by AWS as the SaaS cloud service provider.

Pricing, service availability, and service features are subject to change in accordance with the AWS terms and pricing models.

Where customers choose to utilise cloud infrastructure services, costs will vary depending on usage, configuration, scale, and service selection. As such, pricing is not fixed and is calculated based on actual consumption.

Kerv provides expert consulting, guidance, and delivery services to support customers in selecting, designing, and optimising cloud solutions. We recommend engaging with us early through our consulting and discovery services to help define requirements, understand cost drivers, and navigate cloud options effectively. Please note, multi-cloud environments are an option and Kerv can help consult with you to determine the best approach.

All infrastructure pricing is therefore charged on a pay-as-you-go basis and can be managed via Kerv as the chosen cloud reseller. Kerv will support customers in understanding and managing infrastructure costs in line with project requirements but does not control third-party pricing or changes to services.

Where service requirements are known at this stage, customers may wish to use the following tools to explore indicative pricing:

About Kerv

We help your business get ahead - and stay there.

Tech should put people first, so culture is crucial. Combining ingenuity and emotional intelligence, we use advanced technology to solve your trickiest problems in smart and human-centred ways.

Kerv Digital continues CloudThing's mission of delivering disruptive tech with business and social impact. Whether you want to increase productivity or make better decisions, we use custom accelerators to get you ROI in record time. Get ready for digital transformation done different.

Data

Exploit your data to make more informed decisions. We'll help you harness Microsoft Dataverse, Artificial Intelligence and predictive insights to uncover hidden opportunities and get ahead.

Experience design

Get to the root of your problems and prototype solutions at Design Thinking and Catalyst Workshops. Then we build the intuitive, accessible tech that meets your unique needs.

Pro-code Software development

Across multiple programming languages, delivering multi-cloud solutions. Component-led design means we've got a huge library of problem-solving code and add-ons. Which makes your bespoke software more economical.

DevSecOps

Maximise uptime and regularly deploy updated code through industry-leading CI and CD approaches. We've supported some of the UK's largest live software deployments.

Microsoft Power Platform

Building on Microsoft Power Platform and adding our accelerators and Centre of Excellence support, we'll help you improve and innovate across multiple departments and business cases.

Microsoft Dynamics 365

Take the problem-solving capacity of Microsoft Dynamics 365 to another level for your business - with our user experience design and free, sector-specific accelerators.

Contact Us

We are happy to assist and talk through how this service along with others, can be tried together to support your digital Transformation
