Service Definition

Service Definitions Overview

Security Services

ADVISORY

We provide expertise, knowledge & advice throughout the client engagement with an emphasis on **HUMAN FACTORS**.

INFORMATION SECURITY & ASSURANCE

Using international and industry specific standards we help organisation's assess, present and treat risk to their assets.

THREAT & VULNERABILITY ANALYSIS

Product from our threat & vulnerability analysis shapes remedial planning and execution, and drives a regular client security monitoring and action regime.

DUE DILIGENCE AND M&A SUPPORT

Complementary to traditional financial due diligence, our services focus upon the individuals behind an organisation: executives and persons with significant control.

SOCIAL ENGINEERING

We empower employees to employ and develop countermeasures to reduce the disruption and loss incurred as the result of a social engineering attack.

INCIDENT MANAGEMENT & RESPONSE

We provide effective response to information breaches and support our clients to deliver effective containment of incidents.

- Security hardening and information assurance.
- Value for Money
- Supply-chain risk management

Planning

How the planning service works

Our approach to help buyers plan their cloud services is derived from over a decade's experience of advising government departments and their supply chains. We adopt a risk and opportunities led approach to planning, focusing on the definition and ratification of requirements.

We provide business analysis services that in turn become part of a solution outline and which then underpin the subsequent design, delivery and trade-study assessments.

We work in PRINCE2, MSP or Agile frameworks. Planning approaches are tailored to meet the organisations that we work with and at all stages reflect the culture we work in and the delivery drivers and desired effect.

Xpertex:

- Expert teams from military, defence, intelligence and secure technology backgrounds
- Independent and objective and focused on outcomes and effects
- Assesses an organisation's culture and processes and not just the technology
- Takes clients on a journey beyond 'just compliance'
- Uses the ISO 27000 and 28000 series of standards, as well as guiding clients through Cyber Essentials and Cyber Essentials Plus
- Core tooling and methodologies that are used within a proven Xpertex delivery framework

Core CIS Advisory Services
