

Veracity Pricing Approach

As per the G-Cloud 15 framework and CCS's pricing structure, Veracity's pricing is based on the maximum possible rate that we are able to charge customers for a selection of specialist services and roles in relation to Cloud Support services. These are linked to the SFIA grading system, in order to demonstrate those levels within our pricing.

Veracity will work with the customer organisations who are buying services via G-Cloud, to create a tailored rate card which includes a contracted rate card, reduced rates, discounts, and commercial efficiencies in order to implement bespoke pricing based on the specific requirement, and/or sector. This will be decided on a case by case basis.

Veracity's pricing approach allows our customers to procure services through various pricing models, including capped time and materials, fixed-price deliverable payments, and progress payments. We will work in collaboration with our customers to select the most effective and value for money option for their requirements.
