

Geospatial Pricing

Issue Date: January 2026

Geospatial is a customisable solution that delivers human telematics to police forces and likeminded organisations.

The application designed by Mobile Innovations Inc (www.mobinnoco.com) used in the United Kingdom, interfacing with a range of police enterprise backend systems including but not limited to those listed below allowing the application to work both on-line and off-line, to a limited extent.

- Niche RMS
- PNC/NLEDS
- Gazetteer systems including Hopewiser, QAS, and others
- SunGard Control Works,
- Devices that are GPS enabled
- Other modules that maybe available at the time of purchase

Geospatial is provided as two components being the client software that operates on a mobile device, desktop and the server component known as the MPA Server.

The pricing for the application is based on a named user that allows that named user to operate iPatrol on an unlimited number of devices.
