The Data Graphs Service

Data Graphs is a cloud-native platform designed to transform fragmented data into a governed semantic knowledge backbone. It centralizes reference data, catalogues, and entities, making information easy to discover, link, and reuse.

Transforms Fragmented Data

Creates a unified semantic knowledge backbone from disparate data sources.

Unified Knowledge Graph

Centralises all reference data, catalogues, and entities for easy discovery and reuse.

Enables Responsible AI

Powers responsible AI initiatives by providing a well-governed data foundation.

Supports Agentic Workflows

Facilitates agent-assisted workflows for enhanced efficiency and automation.

MCP-Native Services

Delivers services ready for Agentic AI environments using MCP (Model Context Protocol).

Intuitive UI & APIs

Offers an intuitive user interface and standards-based APIs for seamless integration.

Data Graphs - SaaS Pricing

Data Graphs SaaS Enterprise - Core Platform

£8,000 / month

Includes 5 Databases, 5MM Nodes, 5 Service Accounts (Standard API Throughput), 10 Users

The **Data Graphs SaaS Enterprise - Core Platform** price covers up to 5 databases, 5 million nodes, 5 service accounts (standard API throughput), and 10 named users. Any usage beyond these limits, or additional features and capacity, are provided as optional add-ons and charged separately according to Data Graphs' prevailing pricing model.
